Engineering Design George E. Dieter, George Ellwood Dieter, Linda C. Schmidt, 2008-05-01 **Engineering Design** George Dieter, Linda C. Schmidt, 2012-02-16 Dieter's *Engineering Design* represents a major update of this classic textbook for senior design courses. As in previous editions, *Engineering Design* provides a broader overview of topics than most design texts and contains much more prescriptive guidance on how to carry out design. Dieter focuses on material selection as well as how to implement the design process. *Engineering Design* provides the senior mechanical engineering students with a realistic understanding of the design process. It is written from the viewpoint that design is the central activity of the engineering profession and it is more concerned with developing attitudes and approaches than in presenting design techniques and tools.

Design and Optimization of Thermal Systems, Third Edition Yogesh Jaluria, 2019-09-06 *Design and Optimization of Thermal Systems Third Edition with MATLAB Applications* provides systematic and efficient approaches to the design of thermal systems which are of interest in a wide range of applications. It presents basic concepts and procedures for conceptual design, problem formulation, modeling, simulation, design evaluation, achieving feasible design, and optimization. Emphasizing modeling and simulation with experimentation for physical insight and model validation, the third edition covers the areas of material selection, manufacturability, economic aspects, sensitivity, genetic and gradient search methods, knowledge based design methodology, uncertainty, and other aspects that arise in practical situations. This edition features many new and revised examples and problems from diverse application areas and more extensive coverage of analysis and simulation with MATLAB.

Materials Selection in Mechanical Design Michael F. Ashby, 2024-09-13 *Materials Selection in Mechanical Design Sixth Edition* winner of a 2018 Textbook Excellence Award. Texty describes the procedures for material selection in mechanical design to ensure that the most suitable materials for a given application are identified from the full range of materials and section shapes available. Recognized as the world's leading materials selection textbook, users will find a unique and innovative resource for students, engineers, and product industrial designers. Selected revisions to this new edition ensure the book will continue to meet the needs of all those whose studies or careers involve selecting the best material for the project at hand. Includes new or expanded coverage of materials selection in areas such as additive manufacturing, biomedical manufacturing, digital manufacturing, and cyber manufacturing. Includes an update to the hybrid chapter which has been enhanced with expanded hybrid case. Presents improved pedagogy including new worked examples throughout the text, case studies, homework problems, and mini projects to aid in student learning. Maintains its hallmark features of full color presentation with numerous Ashby materials selection charts, high quality illustrations, and a focus on sustainable design.

Support for the conceptual design stage of effective and resource-efficient offerings Sergio Brambila, 2020-10-20 Human activities in the form of production and consumption have increased to an all time high. In many cases, this increase has resulted in environmental problems such as waste and pollution that in turn affect our health and way

of living Societies have proposed different measures to address such environmental problems These range from different waste treatment technologies to alternative business models policy measures and lifecycle thinking in the design of products to mention but a few In this research the focus is on supporting early design activities of what is often called the conceptual design stage with the objective to provide effective and resource efficient offerings The early design activities considered here are planning analysis and evaluation Design researchers have largely supported these three activities with a variety of methods and tools However previous research has shown that design support coming from academia has had a low uptake in industry In this regard the aim of this research is to propose not only useful but also usable support for design practitioners during the conceptual design stage This research is carried out in the manufacturing sector in Sweden where selected companies expressed an interest in collaborating with academia to address more thoroughly effective and resource efficient offerings To better match company needs and research from academia this research took a pragmatic and cross disciplinary approach This research approach along with literature reviews semi structured interviews workshops and questionnaires shows different ways in which support can be made more useful and usable The main gap addressed here is that the knowledge and the related skills of the user of the support have not been sufficiently explored The results include requirements of the user of the support proposed methods and tools derived from the requirements identified and most importantly the knowledge and skills needed by the user of the support The main message of this research is that support could be expanded from methods and tools to include knowledge and skills needed by design practitioners the users of support The flow of support from academia to industry could also be reinforced in a two way flow through a pragmatic and cross disciplinary approach to first and foremost address design practitioners needs

Materials and Process Selection for Engineering Design Mahmoud M. Farag, 2020-12-30

Introducing a new engineering product or changing an existing model involves developing designs reaching economic decisions selecting materials choosing manufacturing processes and assessing environmental impact These activities are interdependent and should not be

performed in isolation from each other This is because the materials and processes used in making a product can have a major influence on its design cost and performance in service This Fourth Edition of the best selling Materials and Process Selection for Engineering Design takes all of this into account and has been comprehensively revised to reflect the many advances in the fields of materials and manufacturing including Increasing use of additive manufacturing technology especially in biomedical aerospace and automotive applications Emphasizing the environmental impact of engineering products recycling and increasing use of biodegradable polymers and composites Analyzing further into weight reduction of products through design changes as well as material and process selection especially in manufacturing products such as electric cars Discussing new methods for solving multi criteria decision making problems including multi component material selection as well as concurrent and geometry dependent selection of materials and joining technology Increasing use of MATLAB by engineering students in solving problems This textbook features the following pedagogical tools New and updated practical case studies from industry A variety of suggested topics and background information for in class group work Ideas and background information for reflection papers so readers can think critically about the material they have read give their interpretation of the issues under discussion and the lessons learned and then propose a way forward Open book exercises and questions at the end of each chapter where readers are evaluated on how they use the material rather than how well they recall it in addition to the traditional review questions Includes a solutions manual and PowerPoint lecture materials for adopting professors Aimed at students in mechanical manufacturing and materials engineering as well as professionals in these fields this book provides the practical know how in order to choose the right materials and processes for development of new or enhanced products
