Water Power Engineering, 2nd Edition Dandekar M.M. & Sharma K.N., The book provides a comprehensive account of an important sector of engineering the hydro power that is renewable and potentially sustainable It covers the entire scope of the subject in a lucid manner starting from the fundamentals of hydrology to various hydraulic and civil structures to electrical and mechanical equipment as required for hydro power projects Many new issues and challenges voiced in the energy sector in general and water power in particular during the last decade have been addressed in the book Recent innovations and developments in some areas like wave power and new technologies in hydraulic structures like the P K weirs fuse gates stepped spillways CFRD RCC etc find place suitably in the book The book is meant for undergraduate and postgraduate students of civil and electrical engineering and for the professionals interested in the subject NEW IN THE SECOND EDITION Thoroughly rewritten text takes account of the new and growing technology including New types of dams sedimentation of reservoirs rehabilitation of dams Spillway design floods new types of spillways Mathematical models for rainfall runoff analysis including contribution of snowfall Structural components of tidal plants and new types of turbines Wave power exploitation Detailed study on Sardar Sarovar and Tehri projects Fully updated with the latest data up to 2013 Two new chapters on small scale hydro and environmental impact of hydro and multi purpose projects

**Flood Routing in Ungauged Catchments Using Muskingum Methods** Mesfin H. Tewolde, 2008-03-27 River stage or flow rates are required for the design and evaluation of hydraulic structures Most river reaches are ungauged and a methodology is needed to estimate the stages or rates of flow at specific locations in streams where no measurements are available Flood routing techniques are utilised to estimate the stages or rates of flow in order to predict flood wave propagation along river reaches Models can be developed for gauged catchments and their parameters related to physical characteristics such as slope reach width reach length so that the approach can be applied to ungauged catchments in the region The objective of this study is to assess Muskingum based methods for flow routing in ungauged river reaches both with and without lateral inflows Using observed data the model parameters were calibrated to assess performance of the Muskingum flood routing procedures and the Muskingum Cunge method was then assessed using catchment derived parameters for use in ungauged river reaches The Muskingum parameters were derived from empirically estimated variables and variables estimated from assumed river cross sections within the selected river reaches used Three sub catchments in the Thukela catchment in KwaZulu Natal South Africa were selected for analyses with river lengths of 4 21 and 54 km The slopes of the river reaches and reach lengths were derived from a digital elevation model Manning roughness coefficients were estimated from field observations Flow variables such as velocity hydraulic radius wetted perimeters flow depth and top flow width were determined from empirical equations and cross sections of the selected rivers Lateral inflows to long river reaches were estimated from the Saint Venant equation Observed events were extracted for each sub catchment to assess the Muskingum Cunge parameter estimation method and

Three parameter Muskingum method The extracted events were further analysed using empirically estimated flow variables The performances of the methods were evaluated by comparing both graphically and statistically the simulated and observed hydrographs Sensitivity analyses were undertaken using three selected events and a 50% variation in selected input variables was used to identify sensitive variables The performance of the calibrated Muskingum Cunge flood routing method using observed hydrographs displayed acceptable results Therefore the Muskingum Cunge flood routing method was applied in ungauged catchments with variables estimated empirically The results obtained shows that the computed outflow hydrographs generated using the Muskingum Cunge method with the empirically estimated variables and variables estimated from cross sections of the selected rivers resulted in reasonably accurate computed outflow hydrographs with respect to peak discharge timing of peak flow and volume From this study it is concluded that the Muskingum Cunge method can be applied to route floods in ungauged catchments in the Thukela catchment and it is postulated that the method can be used to route floods in other ungauged rivers in South Africa

**Landscape Dynamics, Soils and Hydrological Processes in Varied Climates** Assefa M. Melesse, Wossenu Abtew, 2015-07-21 The book presents the processes governing the dynamics of landscapes soils and sediments water and energy under different climatic regions using studies conducted in varied climatic zones including arid semi arid humid and wet regions The spatiotemporal availability of the processes and fluxes and their linkage to the environment land soil and water management are presented at various scales Spatial scales including laboratory field watershed river basin and regions are represented The effect of tillage operations and land management on soil physical characteristics and soil moisture is discussed The book has 35 chapters in seven sections 1 Landscape and Land Cover Dynamics 2 Rainfall Runoff Processes 3 Floods and Hydrological Processes 4 Groundwater Flow and Aquifer Management 5 Sediment Dynamics and Soil Management 6 Climate change impact on vegetation sediment and water dynamics and 7 Water and Watershed Management

*The Protection and Conservation of Water Resources* Hadrian F. Cook, 2017-03-13 This book is about water in Britain and in the world It is about water resources their conservation protection of water quality for human consumption and aquatic ecosystems Since the publication of the first edition in 1998 major political and regulatory changes have taken place this book provides a clear and comprehensive update of conservation and water resource management issues in the UK over the past two decades and in an expansion of its original UK perspective now includes examples of global best practice The UK s 2003 adoption of the EU Water Framework Directive has had enormous implications for the conservation and management of our water resources In 2016 with the UK s decision to leave the EU the governance scene is entering upon an unpredictable future regarding its major water resource policies The Protection and Conservation of Water Resources Second edition provides a clear and comprehensive update of conservation and water resource management issues Chapter 1 deals with sustainability and water policy outlines the issues and challenges and asks what is integrated water management Chapter 2 reviews water availability and sufficiency in Britain

while Chapter 3 explores the dynamic between institutions and legislative framework Chapter 4 introduces the catchment approach and chapters 5 and 6 explore the issues of sustaining bulk supply and the imperatives of climate change Chapter 7 looks at the contemporary background to water quality issues and Chapter 8 provides case studies of catchment problems both urban and rural Chapter 9 describes solutions in land use change including technical fixes and their sustainability Chapter 10 is concerned with emerging governance arrangements and Chapter 11 takes a global view looking at successful examples around the world to find positive lessons from Europe north America and Australia

*Guidelines for Mine Waste Dump and Stockpile Design* Mark Hawley, John Cuning, 2017-04-01 *Guidelines for Mine Waste Dump and Stockpile Design* is a comprehensive practical guide to the investigation design operation and monitoring of mine waste dumps dragline spoils and major stockpiles associated with large open pit mines These facilities are some of the largest man made structures on Earth and while most have performed very well there are cases where instabilities have occurred with severe consequences including loss of life and extensive environmental and economic damage Developed and written by industry experts with extensive knowledge and experience this book is an initiative of the Large Open Pit LOP Project It comprises 16 chapters that follow the life cycle of a mine waste dump dragline spoil or stockpile from site selection to closure and reclamation It describes the investigation and design process introduces a comprehensive stability rating and hazard classification system provides guidance on acceptability criteria and sets out the key elements of stability and runout analysis Chapters on site and material characterisation surface water and groundwater characterisation and management risk assessment operations and monitoring management of ARD emerging technologies and closure are included A chapter is also dedicated to the analysis and design of dragline spoils *Guidelines for Mine Waste Dump and Stockpile Design* summarises the current state of practice and provides insight and guidance to mine operators geotechnical engineers mining engineers hydrogeologists geologists and other individuals that are responsible at the mine site level for ensuring the stability and performance of these structures Readership includes mining engineers geotechnical engineers civil engineers engineering geologists hydrogeologists environmental scientists and other professionals involved in the site selection investigation design permitting construction operation monitoring closure and reclamation of mine waste dumps and stockpiles

**Handbook of Drought and Water Scarcity** Saeid Eslamian, Faezeh A.
