**Introduction to Computational Engineering with MATLAB®** Timothy Bower, 2022-09-28 Introduction to Computational Engineering with MATLAB aims to teach readers how to use MATLAB programming to solve numerical engineering problems The book focuses on computational engineering with the objective of helping engineering students improve their numerical problem solving skills The book cuts a middle path between undergraduate texts that simply focus on programming and advanced mathematical texts that skip over foundational concepts feature cryptic mathematical expressions and do not provide sufficient support for novices Although this book covers some advanced topics readers do not need prior computer programming experience or an advanced mathematical background Instead the focus is on learning how to leverage the computer and software environment to do the hard work The problem areas discussed are related to data driven engineering statistics linear algebra and numerical methods Some example problems discussed touch on robotics control systems and machine learning Features Demonstrates through algorithms and code segments how numeric problems are solved with only a few lines of MATLAB code Quickly teaches

students the basics and gets them started programming interesting problems as soon as possible No prior computer programming experience or advanced math skills required Suitable for students at undergraduate level who have prior knowledge of college algebra trigonometry and are enrolled in Calculus I MATLAB script files functions and datasets used in examples are available for download from <http://www.routledge.com/9781032221410> Climbing and Walking Robots Manuel Armada, Pablo González de Santos, 2006-01-16 Interest in climbing and walking robots CLAWAR has increased remarkably over recent years Novel solutions for complex and very diverse application fields exploration intervention in severe environments personal services emergency rescue operations transportation entertainment medical etc have been anticipated by great progress in this area of robotics This book contains the proceedings of the 7th Climbing and Walking Robots 2004 CLAWAR 2004 Conference offering the international scientific community one of the most excellent forums for academics researchers and industrialists interested in this motivating area of climbing and walking robots It provides a wide forum of original state of the art contributions from various industrial and new emerging research fields presenting a full picture of climbing and walking robots The conference held in Madrid Spain September 22-24 2004 was organized by the Thematic Network CLAWAR 2 and funded by the European Commission under the GROWTH Program **Meriam's Engineering Mechanics** James L. **Methods for Reliability Improvement and Risk Reduction** Michael Todinov, 2018-10-16 Reliability is one of the most important attributes for the products and processes of any company or organization This important work provides a powerful framework of domain independent reliability improvement and risk reducing methods which can greatly lower risk in any area of human activity It reviews existing methods for risk reduction that can be classified as domain independent and introduces the following new domain independent reliability improvement and risk reduction methods Separation Stochastic separation Introducing deliberate weaknesses Segmentation Self reinforcement Inversion Reducing the rate of accumulation of damage Permutation Substitution Limiting the space and time exposure Comparative reliability models The domain independent methods for reliability improvement and risk reduction do not depend on the availability of past failure data domain specific expertise or knowledge of the failure mechanisms underlying the failure modes Through numerous examples and case studies this invaluable guide shows that many of the new domain independent methods improve reliability at no extra cost or at a low cost Using the proven methods in this book any company and organisation can greatly enhance the

reliability of its products and operations      *Approaching Human Performance* Markus Grebenstein,2014-01-24 Humanoid robotics have made remarkable progress since the dawn of robotics So why don t we have humanoid robot assistants in day to day life yet This book analyzes the keys to building a successful humanoid robot for field robotics where collisions become an unavoidable part of the game The author argues that the design goal should be real anthropomorphism as opposed to mere human like appearance He deduces three major characteristics to aim for when designing a humanoid robot particularly robot hands Robustness against impacts Fast dynamics Human like grasping and manipulation performance Instead of blindly copying human anatomy this book opts for a holistic design methodology It analyzes human hands and existing robot hands to elucidate the important functionalities that are the building blocks toward these necessary characteristics They are the keys to designing an anthropomorphic robot hand as illustrated in the high performance anthropomorphic Awiwi Hand presented in this book This is not only a handbook for robot hand designers It gives a comprehensive survey and analysis of the state of the art in robot hands as well as the human anatomy It is also aimed at researchers and roboticists interested in the underlying functionalities of hands grasping and manipulation The methodology of functional abstraction is not limited to robot hands it can also help realize a new generation of humanoid robots to accommodate a broader spectrum of the needs of human society      **Engineering Mechanics** James L.
