This proceedings volume collects the scientific presentations of the Scandinavian Conference on Image Analysis SCIA 2005 which was held at the University of Joensuu Finland June 19 22 2005 The conference was the fourteenth in the series of biennial conferences started in 1980 The name of the series reflects the fact that the conferences are organized in the Nordic Scandinavian countries following the cycle Sweden Finland Denmark and Norway The event itself has always been international in its participants and presentations Today there are many conferences in the fields related to SCIA In this situation our goal is to keep up the reputation for the high quality and friendly environment of SCIA We hope that participants feel that it is worth attending the conference Therefore both the scientific and social program were designed to support the best features of a scientific meeting to get new ideas for research and to have the possibility to exchange thoughts with fellow scientists To fulfill the above mentioned goals the conference was a single track event This meant that a

higher percentage of the papers than in earlier SCIA were presented as posters We hope that this gave the participants better chances to follow the presentations that they were interested in SCIA 2005 attracted a record number of submissions 236 manuscripts From these 124 were accepted 31 oral presentations and 93 poster presentations This led to an acceptance rate of 53% The program included also six plenary presentations and three tutorials

Image Analysis ,2005 **Image and Video Segmentation Using Graph Cuts** Mayuresh Kulkarni, 2010 *Interactive Segmentation Techniques* Jia He, Chang-Su Kim, C.-C. Jay Kuo, 2013-08-31 This book focuses on interactive segmentation techniques which have been extensively studied in recent decades Interactive segmentation emphasizes clear extraction of objects of interest whose locations are roughly indicated by human interactions based on high level perception This book will first introduce classic graph cut segmentation algorithms and then discuss state of the art techniques including graph

matching methods region merging and label propagation clustering methods and segmentation methods based on edge detection A comparative analysis of these methods will be provided with quantitative and qualitative performance evaluation which will be illustrated using natural and synthetic images Also extensive statistical performance comparisons will be made Pros and cons of these interactive segmentation methods will be pointed out and their applications will be discussed There have been only a few surveys on interactive segmentation techniques and those surveys do not cover recent state of the art techniques By providing comprehensive up to date survey on the fast developing topic and the performance evaluation this book can help readers learn interactive segmentation techniques quickly and thoroughly

An Improved Multithreshold Segmentation Algorithm Based on Graph Cuts Applicable for Irregular Image Yanzhu Hu, Jiao Wang, Xinbo Ai, Xu Zhuang, In order to realize the multithreshold segmentation of images an improved segmentation algorithm based on graph cut theory using artificial bee colony is proposed A new weight function based on gray level and the location of pixels is constructed in this paper to calculate the probability that each pixel belongs to the same region On this basis a new cost function is reconstructed that can use both square and nonsquare images Then the optimal threshold of the image is obtained through searching for the minimum value of the cost function using artificial bee colony algorithm In this paper public dataset for segmentation and widely used images were measured separately Experimental results show that the algorithm proposed in this paper can achieve larger Information Entropy IE higher Peak Signal to Noise Ratio PSNR higher Structural Similarity Index SSIM smaller Root Mean Squared Error RMSE and shorter time than other image segmentation algorithms

Comparative Analysis of Deep Learning and Graph Cut Algorithms for Cell Image Segmentation Ghazal Reshad, 2020

Image segmentation is a commonly used technique in digital image processing with many applications in the area of computer vision and medical image analysis The goal of image segmentation is to partition an image into multiple regions normally based on the characteristics of pixels in a given image Image segmentation could involve separating the foreground from background in an image or clustering image regions based on similarities in intensity color or shape In this thesis we consider the problem of

cell image segmentation and evaluate the performance of two major techniques on a dataset of cell image sequences First we apply a traditional segmentation algorithm based on the so called graph cut that addresses the segmentation problem using an energy minimization scheme defined on a weighted graph Second we use modern techniques based on deep neural networks namely U Net and LSTM that have a time consuming training and a relatively quick testing phase Performance of each technique will be analyzed qualitatively and quantitatively based on various standard measures and will be compared statistically

An Improved Image Segmentation by Graph Cuts [1],2017 Image Segmentation with Semantic Priors
Nhat Bao Sinh Vu,2008 In this thesis we present a set of novel image segmentation algorithms that utilize high level semantic priors available from specific application domains These priors are incorporated into the segmentation framework to further constrain the results to a more semantically meaningful solution space Our algorithms are formulated using Random Field models and employ combinatorial graph cuts for efficient optimization For many instances they guarantee the globally optimal solutions and our experiments demonstrate that the algorithms are applicable to a wide range of segmentation tasks
