An Aci Standard And Report:

Commentary on Building Code Requirements for Reinforced Concrete (ACI 318-63) ACI Committee 318,1965

This Code is intended to apply to any concrete construction that is regulated by the general code of which it forms a part. It should supersede other requirements of the general code on this particular subject. Prestressed concrete is included by the definition of reinforced concrete. Section 301 a Some special structures involve unique problems which are not covered by the code. However many provisions such as concrete quality and design principles are applicable and should be followed.

Scope page 1 *Building Code Requirements for Structural Concrete (ACI 318-14)* ACI Committee 318,2014

The Building Code Requirements for Structural Concrete Code provides minimum requirements for the materials design and detailing of structural concrete buildings and where applicable nonbuilding structures. This Code addresses structural systems members and connections including cast in place precast plain nonprestressed prestressed and composite construction. Among the subjects covered are design and construction for strength serviceability and durability load combinations load factors and strength reduction factors structural analysis methods deflection limits mechanical and adhesive anchoring to concrete development and splicing of reinforcement construction document information field inspection and testing and methods to evaluate the strength of existing structures.

Building Code Requirements for Concrete Thin Shells ACI 318 2 is adopted by reference in this Code. The Code user will find that ACI 318 14 has been substantially reorganized and reformatted from previous editions. The principal objectives of this reorganization are to present all design and detailing requirements for structural systems or for individual members in chapters devoted to those individual subjects and to arrange the chapters in a manner that generally follows the process and chronology of design and construction. Information and procedures that are common to the design of members are located in utility chapters. The quality and testing of materials used in construction are covered by reference to the appropriate ASTM standard specifications. Welding of reinforcement is covered by reference to the appropriate American Welding Society AWS standard. Uses of the Code include adoption by reference in a general building code and earlier editions have been widely used in this manner. The Code is written in a format that allows such reference without change to its language. Therefore background details or suggestions for carrying out the requirements or intent of the Code provisions cannot be included within the Code itself. The Commentary is provided for this purpose. Some of the considerations of the committee in developing the Code are discussed within the Commentary with emphasis given to the explanation of new or revised provisions. Much of the research data referenced in preparing the Code is cited for the user desiring to study individual questions in greater detail. Other documents that provide suggestions for carrying out the requirements of the Code are also cited. Technical changes from ACI 318 11 to ACI 318 14 are outlined in the May 2014 issue of Concrete International. Transition keys showing how the code was reorganized are provided on the ACI website on the 318 Resource Page under Topics in Concrete.
