special focus on physical modeling of the canonical channel with real world examples relating to radar sonar and general telecommunications This book offers a detailed treatment and an array of problems and results spanning an exceptionally broad range of technical subjects in the communications field Complete with special functions integrals solutions of integral equations and an extensive updated bibliography by chapter An Introduction to Statistical Communication Theory is a seminal reference particularly for anyone working in the field of communications as well as in other areas of statistical physics Originally published in 1960 *An Introduction to English Economic History and Theory* William James Ashley, 1906

Lectures on Decision Theory William Karush, 1963 These lecture notes deal with the mathematical theory of decision making i e wihemactical models of situations in which there is a set of alternative actions some condition of knowledge concerning the relationship between action and outcome and an objective of achieving a good or best outcome on the basis of this knowledge The models are idealizations and simplifications of reality The comparatively elementary state of the field of individual and group decision making as a quantitative science in contrast with a field such as physics suggests that mathematical theorizing on phenomena of decision making is very much an exploratory enterprise and that ex isting models have limited generality and appli cability The purpose is to attempt an exposition of some of the principal notions of this body of theory which will point up many of the essential ideas without entering too deeply into technical mathematical problems The side of decision making dealt with is the normative aspect of the subject which is a theoretical approach that is usefully thought of as describing the behavior of the hypothetical rational decision maker the normative approach is based upon mathematics formal deductions and axiomatics Author *Management Decision Making Under Uncertainty* Thomas R. Dyckman, Seymour Smidt, Alan K. McAdams, 1969
