

ACTIVITY 1

Engineering Economic Analysis Procedure

Learning Outcome:

- Apply Engineering Economics Analysis Procedure

Objective:

The specific goal for this exercise is:

- to apply and analyze Engineering Economics procedure by evaluating a company-based problem.

Activity Task:

This is a group activity. Analyze the given situation and answer what is being asked on the latter part of the problem. Show your complete solution to the problem.

Problem:

During your first month as an employee at Greenfield Industries (a large drill-bit manufacturer), you are asked to evaluate alternatives for producing a newly designed drill bit on a turning machine. Your boss' memorandum to you has practically no information about what the alternatives and what criteria should be used. The same task was posed to a previous employee who could not finish the analysis, but she has given you the following information:

An old turning machine valued at \$350,000 exists (in the warehouse) that can be modified for the new drill bit. The in-house technicians have given an estimate of \$40,000 to modify this machine, and they assure you that they will have the machine ready before the projected start date (although they have never done any modifications of this type). It is hoped that the old turning machine will be able to meet production requirements at full capacity. An outside company, McDonald Inc., made the machine seven years ago and can easily do the same modifications for \$60,000. The cooling system used for this machine is not environmentally safe and would require some disposal costs. McDonald Inc. has offered to build a new turning machine with more environmental safeguards and higher capacity for a price of \$450,000. McDonald Inc. has promised this machine before the startup date and is willing to pay any late costs. Your company has \$100,000 set aside for the start-up of the new product line of drill bits.

Fundamentals of Engineering Economics and Decision Analysis David Whitman, Ronald Terry, 2012-04-27

The authors cover two general topics basic engineering economics and risk analysis in this text Within the topic of engineering economics are discussions on the time value of money and interest relationships These interest relationships are used to define certain project criteria that are used by engineers and project managers to select the best economic choice among several alternatives Projects examined will include both income and service producing investments The effects of escalation inflation and taxes on the economic analysis of alternatives are discussed Risk analysis incorporates the concepts of probability and statistics in the evaluation of alternatives This allows management to determine the probability of success or failure of the project Two types of sensitivity analyses are presented The first is referred to as the range approach while the second uses probabilistic concepts to determine a measure of the risk involved The authors have designed the text to assist individuals to prepare to successfully complete the economics portions of the Fundamentals of Engineering Exam
