Particle Verbs in English Han Luo, 2019-03-01 This book explains why cognitive linguistics offers a plausible theoretical framework for a systematic and unified analysis of the syntax and semantics of particle verbs. It explores the meaning of the verb-particle syntax, the particle placement of transitive particle verbs, how particle placement is related to idiomaticity, and the relationship between idiomaticity and semantic extension. It also offers valuable linguistic implications for future studies on complex linguistic constructions using a cognitive linguistic approach, as well as insightful practical implications for the learning and teaching of English particle verbs.

Particle Placement in English L1 and L2 Academic Writing Alexandra Kinne, 2020-09-18 This study seeks to contribute to a better understanding of how syntactic variation is affected by probabilistic factors in English as a foreign language (EFL) L2, exemplified by the effect of weight on the syntactic variation with English transitive verb-particle constructions, e.g. look up, sort out, and transitive verb-prepositional phrase (PP) constructions, e.g. take into account, bear in mind. With these constructions, the particle PP may occur either adjacent to the verb or separated from the verb by a direct object noun phrase (DO NP). Being highly influenced by the weight of the DO NP in native L1 English, little is known about the factors including syntactic weight that govern this variation in L2 English. Against the background of possible native language transfer, this study examines whether advanced L1 German EFL learners are sensitive to the probabilistic effect of weight on syntactic choices with verb-particle PP constructions, and whether there are differences when compared to English native speakers. Triangulating comparative corpus data and experimental data (i.e. elicited production and elicited assessment), the study provides converging evidence from language production and intuition that the learners have acquired a near-native awareness of weight effects in verb-particle PP constructions, with differences indicating a tendency to more conservative choices.
