Coding Theory Lecture Notes

Nathan Kaplan and appendices of the tutorial

September 7, 2011

These are the notes for the 2011 Summer Tutorial on Coding Theory. I have not gone through and given the best references and attributions for all of the results given here, but the presentation relies heavily on two sources, van Lint's *Introduction to Coding Theory* and the book of Huffman and Pless *Fundamentals of Error-Correcting Codes*. I also used course notes written by Sebastian Pancratz from a Part II course given at Cambridge on Coding Theory and Cryptography given by Professor Tom Fisher, and my own course notes from a Cambridge Part III course on Arithmetic Combinatorics course given by Professor Tim Gowers. I also included notes from Henry Cohn's 2010 course, Applied Math 201 for the Pure Mathematician. This last section of the notes is based on Nigel Boston's course notes titled "Graph Based Codes."

All mistakes in these notes are my fault.

High-Dimensional Probability Roman Vershynin,2018-09-27 An integrated package of powerful probabilistic tools and key applications in modern mathematical data science   Recent Developments in the Inverse Galois Problem Jointsummerresearchconf Onrecentdevel Intheinverse,1995-07-30 This book contains the refereed proceedings of the AMS IMS SIAM Joint Summer Research Conference on Recent Developments in the Inverse Galois Problem held in July 1993 at the University of Washington Seattle A new review of Serre s Topics in Galois Theory serves as a starting point The book describes the latest research on explicit presentation of the absolute Galois group of the rationals Containing the first appearance of generalizations of modular curves the book presents applications that demonstrate the full scope of the Inverse Galois Problem In particular the papers collected here show the ubiquity of the applications of the Inverse Galois Problem and its compelling significance The book will serve as a guide to progress on the Inverse Galois Problem and as an aid in using this work in other areas of mathematics This includes coding theory and other finite field applications Group theory and a first course in algebraic curves are sufficient for understanding many papers in the volume Graduate students will find this an excellent reference to current research as it contains a list of problems appropriate for thesis material in arithmetic geometry algebraic number theory and group theory   Coding Theory Kit Tyabandha,2007-01-17 This book was written from the material I prepared for my teaching of a course Coding Theory at the Mathematics Department Mahidol University Thailand in the second term from end 2005 until early 2006 when I used to be a lecturer there   *Coding Theory and Cryptology* Harald Niederreiter,2002 The inaugural research program of the Institute for Mathematical Sciences at the National University of Singapore took place from July to December 2001 and was devoted to coding theory and cryptology As part of the program tutorials for graduate students and junior researchers were given by world renowned scholars These tutorials covered fundamental aspects of coding theory and cryptology and were designed to prepare for original research in these areas The present volume collects the expanded lecture notes of these tutorials The topics range from mathematical areas such as computational number theory exponential sums and algebraic function fields through coding theory subjects such as extremal problems quantum error correcting codes and algebraic geometry codes to cryptologic subjects such as stream ciphers public key infrastructures key management authentication schemes and distributed system security

Coding Theory Jacobus H. van Lint,2013-12-11   *Mathematical Reviews* ,2003   *Computational Optimization* Jong-Shi Pang,2012-12-06 Computational Optimization A Tribute to Olvi Mangasarian serves as an excellent reference providing insight into some of the most challenging research issues in the field This collection of papers covers a wide spectrum of computational optimization topics representing a blend of familiar nonlinear programming topics and such novel paradigms as semidefinite programming and complementarity constrained nonlinear programs Many new results are presented in these papers which are bound to inspire further research and generate new avenues for applications An informal categorization of

the papers includes Algorithmic advances for special classes of constrained optimization problems Analysis of linear and nonlinear programs Algorithmic advances B stationary points of mathematical programs with equilibrium constraints Applications of optimization Some mathematical topics Systems of nonlinear equations **Information Theoretic Learning** Jose C. Principe,2010-04-06 This book is the first cohesive treatment of ITL algorithms to adapt linear or nonlinear learning machines both in supervised and unsupervised paradigms It compares the performance of ITL algorithms with the second order counterparts in many applications **University of California Union Catalog of Monographs Cataloged by the Nine Campuses from 1963 Through 1967: Authors & titles** University of California (System). Institute of Library Research,University of California, Berkeley,1972 **Data Science and Analytics with Python** Jesus Rogel-Salazar,2018-02-05 Data Science and Analytics with Python is designed for practitioners in data science and data analytics in both academic and business environments The aim is to present the reader with the main concepts used in data science using tools developed in Python such as SciKit learn Pandas Numpy and others The use of Python is of particular interest given its recent popularity in the data science community The book can be used by seasoned programmers and newcomers alike The book is organized in a way that individual chapters are sufficiently independent from each other so that the reader is comfortable using the contents as a reference The book discusses what data science and analytics are from the point of view of the process and results obtained Important features of Python are also covered including a Python primer The basic elements of machine learning pattern recognition and artificial intelligence that underpin the algorithms and implementations used in the rest of the book also appear in the first part of the book Regression analysis using Python clustering techniques and classification algorithms are covered in the second part of the book Hierarchical clustering decision trees and ensemble techniques are also explored along with dimensionality reduction techniques and recommendation systems The support vector machine algorithm and the Kernel trick are discussed in the last part of the book About the Author Dr Jes s Rogel Salazar is a Lead Data scientist with experience in the field working for companies such as AKQA IBM Data Science Studio Dow Jones and others He is a visiting researcher at the Department of Physics at Imperial College London UK and a member of the School of Physics Astronomy and Mathematics at the University of Hertfordshire UK He obtained his doctorate in physics at Imperial College London for work on quantum atom optics and ultra cold matter He has held a position as senior lecturer in mathematics as well as a consultant in the financial industry since 2006 He is the author of the book Essential Matlab and Octave also published by CRC Press His interests include mathematical modelling data science and optimization in a wide range of applications including optics quantum mechanics data journalism and finance **Introduction To Algebraic Coding Theory** Tzuong-tsieng Moh,2022-02-18 We live in the age of technology where messages are transmitted in sequences of 0 s and 1 s through space It is possible to make an error with noisy channels so self correcting codes become vital to eradicate all errors as the number of errors is small These self

correcting codes are widely used in the industry for a variety of applications including e mail telephone remote sensing e g photographs of Mars amongst others We will present some essentials of the theory in this book Using linear algebra we have the salient Hamming codes The next level of coding theory is through the usage of ring theory especially polynomials rational functions and power series to produce BCH codes Reed Solomon codes and the classical Goppa codes Then we progress to the geometric Goppa code using Algebraic Geometry   Introduction to Coding Theory and Algebraic Geometry J. van Lint,G. van der Geer,2012-12-06 These notes are based on lectures given in the semmar on Coding Theory and Algebraic Geometry held at Schloss Mickeln Diisseldorf November 16 21 1987 In 1982 Tsfasman Vladut and Zink using algebraic geometry and ideas of Goppa constructed a seqeunce of codes that exceed the Gilbert Varshamov bound The result was considered sensational Furthermore it was surprising to see these unrelated areas of mathematics collaborating The aim of this course is to give an introduction to coding theory and to sketch the ideas of algebraic geometry that led to the new result Finally a number of applications of these methods of algebraic geometry to coding theory are given Since this is a new area there are presently no references where one can find a more extensive treatment of all the material However both for algebraic geometry and for coding theory excellent textbooks are available The combination ofthe two subjects can only be found in a number ofsurvey papers A book by C Moreno with a complete treatment of this area is in preparation We hope that these notes will stimulate further research and collaboration of algebraic geometers and coding theorists G van der Geer J H van Lint Introduction to CodingTheory and Algebraic Geometry PartI CodingTheory Jacobus H vanLint 11 1 Finite fields In this chapter we collect without proof the facts from the theory of finite fields that we shall need in this course   *Graph Theory, Coding Theory, and Block Designs* Peter Jephson Cameron,Jacobus Hendricus van Lint,1975 These are notes deriving from lecture courses given by the authors in 1973 at Westfield College London The lectures described the connection between the theory of t designs on the one hand and graph theory on the other A feature of this book is the discussion of then recent construction of t designs from codes Topics from a wide range of finite combinatorics are covered and the book will interest all scholars of combinatorial theory   **Different Aspects of Coding Theory** Robert Calderbank,1995 The symposia in applied mathematics have been held under the auspices of the American Mathematical Society and others since 1967 This books connects coding theory with actual applications in consumer electronics and with other areas of mathematics It covers in detail the mathematical foundations of digital data storage and makes connections to symbolic dynamics linear systems and finite automata It also explores the use of algebraic geometry within coding theory and examines links with finite geometry statistics and theoretical computer science   Computers, Control & Information Theory ,1983   **Coding Theory** San Ling,Chaoping Xing,2004-02-12 Coding theory is concerned with successfully transmitting data through a noisy channel and correcting errors in corrupted messages It is of central importance for many applications in computer science or engineering This book gives a comprehensive introduction to coding theory whilst only assuming basic

linear algebra It contains a detailed and rigorous introduction to the theory of block codes and moves on to more advanced topics like BCH codes Goppa codes and Sudan s algorithm for list decoding The issues of bounds and decoding essential to the design of good codes features prominently The authors of this book have for several years successfully taught a course on coding theory to students at the National University of Singapore This book is based on their experiences and provides a thoroughly modern introduction to the subject There are numerous examples and exercises some of which introduce students to novel or more advanced material   *The Big Book of Colleges, 1997* Edward Custard,Princeton Review (Firm),1996-07-30 Lists more than 1 600 colleges and universities and provides information about admissions and academic programs
