Artificial Intelligence Foundations Of Computational Agents:

Artificial Intelligence David L. Poole, Alan K. Mackworth, 2010-04-19 Recent decades have witnessed the emergence of artificial intelligence as a serious science and engineering discipline This textbook aimed at junior to senior undergraduate students and first year graduate students presents artificial intelligence AI using a coherent framework to study the design of intelligent computational agents By showing how basic approaches fit into a multidimensional design space readers can learn the fundamentals without losing sight of the bigger picture The book balances theory and experiment showing how to link them intimately together and develops the science of AI together with its engineering applications Although structured as a textbook the book's straightforward self-contained style will also appeal to a wide audience of professionals researchers and independent learners AI is a rapidly developing field this book encapsulates the latest results without being exhaustive and encyclopedic The text is supported by an online learning environment AIspace <http://aispace.org> so that students can experiment with the main AI algorithms plus problems animations lecture slides and a knowledge representation system

Logic Programming and Nonmonotonic Reasoning James Delgrande, Wolfgang Faber, 2011-05-02 This volume contains the refereed proceedings of the 11th International Conference on Logic Programming and Nonmonotonic Reasoning LPNMR 2011 held in May 2011 in Vancouver Canada The 16 revised full papers 13 technical papers 1 application description and 2 system descriptions and 26 short papers 16 technical papers 3 application description and 7 system descriptions which were carefully reviewed and selected from numerous submissions are presented together with 3 invited talks Being a forum for exchanging ideas on declarative logic programming nonmonotonic reasoning and knowledge representation the conference aims to facilitate interactions between those researchers and practitioners interested in the design and implementation of logic based programming languages and database systems and those who work in the area of knowledge representation and nonmonotonic reasoning

Artificial Intelligence David L. Poole, Alan K. Mackworth, 2017-09-25 Artificial Intelligence presents a practical guide to AI including agents machine learning and problem solving simple and complex domains

Artificial Intelligence and Machine Learning Shoaib Irfan Mohammed , 2025-10-29 Artificial Intelligence AI and Machine Learning ML are rapidly advancing fields that focus on creating systems capable of performing tasks that normally require human intelligence These tasks include learning from experience recognizing patterns making decisions solving problems and adapting to new situations Artificial Intelligence is the broader concept that aims to build intelligent machines Machine Learning is a subset of AI that enables systems to automatically learn and improve from data without being explicitly programmed

Human-Centered AI Ben Shneiderman, 2022-01-13 The remarkable progress in algorithms for machine and deep learning have opened the doors to new opportunities and some dark possibilities However a bright future awaits those who build on their working methods by including HCAI strategies of design and testing As many technology companies and thought leaders have argued the goal

is not to replace people but to empower them by making design choices that give humans control over technology In Human Centered AI Professor Ben Shneiderman offers an optimistic realist s guide to how artificial intelligence can be used to augment and enhance humans lives This project bridges the gap between ethical considerations and practical realities to offer a road map for successful reliable systems Digital cameras communications services and navigation apps are just the beginning Shneiderman shows how future applications will support health and wellness improve education accelerate business and connect people in reliable safe and trustworthy ways that respect human values rights justice and dignity

Cura Animarum Ioan C. Veres,2025-04-25 As artificial intelligence advances healthcare faces a profound ethical question Can machines truly care This book critically examines the rise of AI driven social robots carebots in patient care evaluating their benefits and potential harms through the lens of Christian ethics While AI may enhance efficiency and offer support in specific healthcare contexts it also risks dehumanizing care replacing genuine human presence with technological substitutes Grounded in a theology of covenant care this work builds its ethical argument around the biblical parable of the Good Samaritan emphasizing the irreplaceable nature of human compassion It presents theological and ethical criteria to guide the responsible use of AI in healthcare ensuring that technology serves rather than supplants the dignity of human relationships This book is essential reading for theologians ethicists healthcare professionals and AI developers navigating the intersection of faith ethics and emerging technology As healthcare increasingly integrates AI *Cura Animarum* challenges readers to consider where technology supports human dignity and where it threatens to erode the essence of genuine care Is AI merely a tool or does it risk redefining what it means to care Artificial Inteligence and Data Science Dr. Nibedita Das, Dr. S M P

Qubeb, Keerthi Amistapuram, Dr. Ramesh Kumar Yadav ,2025-11-11 This course introduces the core concepts of Artificial Intelligence AI and Data Science covering intelligent problem solving machine learning techniques statistical analysis and data driven decision making Topics include supervised and unsupervised learning neural networks data preprocessing visualization predictive modeling and AI applications Students learn to build models analyze datasets and apply AI tools to solve real world problems across domains such as healthcare finance automation and computing AI for Cyber Security

Dr. A. Ezil Sam Leni,2026-01-30 AI for Cyber Security is a comprehensive academic text that explores the application of artificial intelligence techniques to detect prevent and respond to cyber threats in modern digital systems The book covers core topics such as machine learning for intrusion detection anomaly detection malware analysis phishing detection threat intelligence behavioral analytics and automated incident response It also discusses deep learning methods natural language processing for security logs adversarial attacks and AI driven risk assessment frameworks Emphasizing real world case studies and practical implementation the text highlights how intelligent systems enhance network security cloud protection and data privacy Suitable for students and professionals in cybersecurity computer science and information technology the book provides a strong foundation in designing AI powered security solutions for evolving cyber threats **Electricity**

Markets with Increasing Levels of Renewable Generation: Structure, Operation, Agent-based Simulation, and Emerging Designs Fernando Lopes,Helder Coelho,2018-02-14 This book describes the common ground between electricity markets EMs and software agents or artificial intelligence generally It presents an up to date introduction to EMs and intelligent agents and offers a comprehensive description of the research advances and key achievements related to existing and emerging market designs to reliably and efficiently manage the potential challenges of variable generation VG Most EMs are unique in their complex relationships between economics and the physics of energy but were created without the notion that large penetrations of variable generation VG would be part of the supply mix An advanced multi agent approach simulates the behavior of power markets over time particularly markets with large scale penetrations of renewable resources It is intended as a reference book for researchers academics and industry practitioners but given the scope of the chapters and the highly accessible style the book also provides a coherent foundation for several different graduate courses

Statistical Relational Artificial Intelligence Luc De Raedt,Kristian Kersting,Sriraam Natarajan,David Poole,2016-03-24 An intelligent agent interacting with the real world will encounter individual people courses test results drugs prescriptions chairs boxes etc and needs to reason about properties of these individuals and relations among them as well as cope with uncertainty Uncertainty has been studied in probability theory and graphical models and relations have been studied in logic in particular in the predicate calculus and its extensions This book examines the foundations of combining logic and probability into what are called relational probabilistic models It introduces representations inference and learning techniques for probability logic and their combinations The book focuses on two representations in detail Markov logic networks a relational extension of undirected graphical models and weighted first order predicate calculus formula and Problog a probabilistic extension of logic programs that can also be viewed as a Turing complete relational extension of Bayesian networks

Rational Learning Jonathan Matthew Gratch,Gerald DeJong,University of Illinois at Urbana-Champaign. Department of Computer Science,1993 The agent must possess deliberative capabilities to assess the relative merits of these actions in the larger context of its overall behavior and resource constraints We present an algorithm that embodies these ideas within the area of speed up learning This algorithm automatically assesses the benefits and costs

of learning and flexibly allocates resources to learning depending on the resource demands of the current situation We evaluate the algorithm in the real world domain of scheduling space craft data transmissions
