Humanizing the Digital Workspace Marko Orel, Matej Černe, Sut I Wong, 2025-05-09 The digital economy has fundamentally transformed how we live and work bringing opportunities and challenges One of the key challenges is understanding how to effectively navigate the relationship between people and technology and harness its power to foster creativity innovation and digital leadership This book examines the relationship between people and technology in the digital workspace from a multidisciplinary perspective Unlike most of the existing literature which focuses on the technological aspects of digitization in the workplace this book equally considers the psychological social and cultural

implications as well. The contributing authors also provide insights on employee well-being, motivation and engagement and challenge the assumption that digital technology stifles creativity by demonstrating how innovation can foster collaboration, experimentation and risk-taking. Featuring research, theories, case studies, surveys and interviews from fields such as sociology, psychology and management, this book is of interest to scholars, researchers and students in sociology, psychology, management and related disciplines, as well as professionals and leaders looking to better understand the impact of technology on the modern workplace.

Biomedical Engineering and Environmental Engineering David Chan, 2015-05-06
This conference series is a forum for enhancing mutual understanding between Biomedical Engineering and Environmental Engineering fields. This proceeding provides contributions from many experts representing industry and academic establishments worldwide. The researchers are from different countries and professional backgrounds. The conference brought **Green Indicators to Inform Circular Economy under Climate Change, 2nd edition** Muhlis Can, Bodo Sturm, Jan Brusselaers, 2025-10-10. The obstacle of climate change is among the major concerns that mankind is experiencing today. Climate change poses remarkable risks to the planet and human health, such as extreme weather conditions, unpredictable rain, fall, decreasing of agricultural productivity and lack of food. Thus, we need to find solutions to protect the environment and to maintain sustainable development. To do that, it is important to detect the impact of social and economic parameters on environmental outcomes, such as economic structure, trade volume and value, human capital, education, globalization, green economy and economic complexity. In this collection, we aim to expand our knowledge about the relationship between environment and different social and economic indicators, which will provide us knowledge to make reliable and long-term plans. Under these circumstances, we need to identify the parameters that impact the environment, both positively and negatively. Additionally, there is a need that we prepare long-term plans to maintain technological, social and economic development for a sustainable ecology and biological life. Thanks to this Research Topic, we aim to expand our knowledge about the potential micro and macro determinants of environmental quality and sustainable development, such as economic activities, green economic and growth indicators, specifically with respect to developments in green economy, green trade, green finance and green innovation, as they pertain to circular economy and changing economic complexity. Potential topics include, but are not limited to: Innovation, economic structure and environmental quality, Trade and environment relationship, Green Economy Indicators, such as Green Finance, Green Trade, Green Products and Green Innovation, and their economic and environmental impacts, Economic complexity and its environmental consequences, Circular Economy as a driver of sustainable development, Theoretical formulation and empirical analysis of green economy and green growth, Economic and social determinants of sustainable development.

Environmental Planning in the Netherlands Gert de Roo,2003 The Netherlands is one of the most prominent and innovative countries in the field of environmental planning Over the past decade its government has introduced such ground breaking schemes as Integrated Environmental Zoning the City Environment Project the Bubble Concept and Policy Concepts and new approaches to coping with noise odours soil pollution air pollution and safety issues These initiatives and policy tools reflect a rapidly changing and decentralising environmental policy which contrasts with more conventional environmental ideologies However at present little is known of these policies in the international arena De Roo shows how and why in recent years the country s planning system has moved away from its traditional top down structure The resulting changes have had far reaching consequences for the traditional principles of Dutch environmental policy In addition measures for compensating excessive environmental loads are now open to discussion and environmental quality is a subject of negotiation among stakeholders All these developments mean that environmental policy making has become more closely integrated with local initiatives that focus on general location specific qualities In this book this development is referred to as tailor made comprehensive planning which relates closely to the local context is area specific situation dependent and embraces shared governance
