NUMBER & CHARACTER

Integer
The integer data type represents whole numbers. It is the most basic of the numeric types. The range of values is from -2,147,483,648 to 2,147,483,647. The integer type is used for counting and indexing.

Float
The float data type represents real numbers. It is used for calculations involving fractions and decimals. The range of values is from approximately 1.18e-38 to 3.4e+38. The float type is used for scientific and engineering calculations.

Double
The double data type represents real numbers with higher precision than float. It is used for calculations requiring more accuracy. The range of values is from approximately 2.23e-308 to 1.8e+308. The double type is used for high-precision scientific and engineering calculations.

Character
The character data type represents a single character. It is used for storing and manipulating individual characters. The range of values is from 0 to 255. The character type is used for string processing and character-based operations.

String
The string data type represents a sequence of characters. It is used for storing and manipulating text. The range of values is from 0 to 2,147,483,647 characters. The string type is used for text processing and string-based operations.

Boolean
The boolean data type represents logical values. It is used for storing and manipulating true and false values. The range of values is from 0 to 1. The boolean type is used for conditional logic and boolean operations.

Operator
Operators are symbols that perform operations on operands. They are used to perform arithmetic, logical, and bitwise operations. The range of values is from 0 to 255. The operator type is used for mathematical and logical operations.

Expression
An expression is a combination of operators and operands. It is used to perform calculations and logical operations. The range of values is from 0 to 255. The expression type is used for mathematical and logical operations.

Statement
A statement is a sequence of instructions that the computer can execute. It is used to perform actions and control the flow of the program. The range of values is from 0 to 255. The statement type is used for program logic and control flow.

Function
A function is a block of organized, reusable code that is used to perform a single, related action. It is used to encapsulate logic and perform specific tasks. The range of values is from 0 to 255. The function type is used for modular programming and code reuse.

Class
A class is a blueprint for creating objects. It is used to define the structure and behavior of objects. The range of values is from 0 to 255. The class type is used for object-oriented programming and data organization.

Object
An object is an instance of a class. It is used to represent data and perform actions. The range of values is from 0 to 255. The object type is used for object-oriented programming and data representation.
