In the chapters, these three dimensions of the good working life are related to various individual differences, such as demographic and personality characteristics, as well as different work characteristics, including job demands and job resources. Predicting Employees' Work Exhaustion, Job Satisfaction, and Turnover

Intention: The Role of Informed Job Resources and Personal Resources Jignya M. Patel, 2015 Turnover intention of information technology (IT) professionals and IT users has been a topic of interest to both academics and industry in recent years. Job demands such as excessive workload, work exhaustion, relentless deadlines, role conflict, and role ambiguity have all been found to affect turnover intention of IT professionals and IT users. Yet researchers have paid little attention to the influence of job resources and personal resources. The purpose of this research, presented in the form of two essays, is to explore the effect of those influences on turnover intention of IT professionals and IT users. Using job demand resource theory, the first essay presents a holistic model that integrates job and IT demands and resources of an informed job. We test the influence of these demands and resources on work exhaustion, job satisfaction, and turnover intention of employees in a relatively recent informed industry, i.e., truck drivers. We find that demands of an informed job increase stress, resulting in work exhaustion. However, we also find that resources of an informed job, including IT resources, reduce the influence of work exhaustion and increase job satisfaction. Recommendations for job design to improve employee well-being and improve job retention are offered based on the study results. Using identity theory, the second essay examines the effect of personal resources, i.e., role identity, team identity, and organizational identity, on software development professionals' job satisfaction and turnover intention. Identity is a form of personal resource that individuals bring into their role performance as a professional in their area of expertise, role identity as a member of a team, team identity, and as a loyal employee of the organization, organizational identity. Using data from 192 software development professionals, the results of the study show that developers who identified highly with their role experienced greater job satisfaction but were also more likely to quit their organization. Contrary to our expectations, developers' team identity did not affect either their job satisfaction or turnover intention.
