**Thinking** Stanley Woll,2001-07-01 Appropriate as a textbook for courses in cognitive psychology or social cognition  
Everyday Thinking reviews the rapidly growing literature on cognition in naturalistic settings It differs from other textbooks in that where possible it focuses on thinking in real world settings rather than in controlled laboratory settings and provides detailed treatments of each of the following topics how we form impressions of and represent persons in memory how we recognize and represent faces how we reason in our day to day lives and go about solving everyday problems how we make judgments and decisions how we encode memories of events both for future action and for our own life histories and what are some of the implications of everyday knowledge and cognition for education and instruction This book presents the theoretical positions and research evidence on each of these topics and examines the generally unexplored connections among them As a result this book presents the study of cognition in a more relevant form and in a context that readers can more readily apply to their own lives **The Oxford Handbook of Memory** Endel Tulving,Fergus I. M. Craik,2005-05-05

**The Cognitive Neuroscience of Memory** Howard Eichenbaum, 2002 This clear and accessible textbook introduces students to the brain s remarkable capacity for memory It begins with a history of thinking and research on the biological bases of memory highlighting discoveries about the brain made in a Golden Era of neuroscience around the turn of the 20th century This is followed by presentation of our current understanding of the neurobiology of memory organized into sections corresponding to the book s four major themes The first is Connection and it considers how memory is based on alterations in the communication between nerve cells Research on the physiology and biochemistry of neurons has revealed a cascade of molecular events and structural changes that enhance or weaken the connectivity of nerve cells in support of memory The second theme is Cognition which considers the psychological structure of memory Early work on this topic involved controversy over the basic cognitive processes that underlie memory and modern research has shown that these characterizations reflect distinctions among qualitatively different forms of memory The third theme is Compartmentalization the notion that the different forms of memory are accomplished by distinct brain systems Recent research has revealed parallel memory systems that separately mediate our ability for conscious recollection

our capacity to acquire skills and habits and our acquisition of emotional attachments and aversions The fourth theme is Consolidation the process by which memories are transformed from a labile trace into a permanent store Scientists have shown that there are two distinct stages in memory consolidation one involving cellular mechanisms that underlie a fixation of changes in the neuronal connection strengths and the other involving a reorganization and reconstruction of the circuits that store and retrieve memories The book assumes little background knowledge from biology or psychology and is intended as a text for use in undergraduate courses on memory and cognitive science and for early graduate students in neuroscience cognitive science or biology It encapsulates the major concepts in the field and makes this area of research accessible to students who pursue a variety of related disciplines
