Guide to 3D Vision Computation Kenichi Kanatani, Yasuyuki Sugaya, Yasushi Kanazawa, 2016-12-09 This classroom tested and easy to understand textbook reference describes the state of the art in 3D reconstruction from multiple images taking into consideration all aspects of programming and implementation Unlike other computer vision textbooks this guide takes a unique approach in which the initial focus is on practical application and the procedures necessary to actually build a computer vision system The theoretical background is then briefly explained afterwards highlighting how one can quickly and simply obtain the desired result without knowing the derivation of the mathematical detail Features reviews the fundamental algorithms underlying computer vision describes the latest techniques for 3D reconstruction from multiple images summarizes the mathematical theory behind statistical error analysis for general geometric estimation problems presents derivations at the end of each chapter with solutions supplied at the end of the book provides additional material at an associated website

HP Visual User Environment 3.0 Hewlett Packard, 1995 [User Guide for VISION 3.4.7 \(Verifiable Fuel Cycle Simulation\) Model](#), 2011 The purpose of this document is to provide a guide for using the current version of the Verifiable Fuel Cycle Simulation VISION model This is a complex model with many parameters and options the user is strongly encouraged to read this user guide before attempting to run the model This model is an R this model represents a dynamic rather than steady state approximation of the nuclear fuel system VISION models the nuclear cycle at the system level not individual facilities e g reactor types not individual reactors and separation types not individual separation plants Natural uranium can be enriched which produces enriched uranium which goes into fuel fabrication and depleted uranium DU which goes into storage Fuel is transformed transmuted in reactors and then goes into a storage buffer Used fuel can be pulled from storage into either separation or disposal If sent to separations fuel is transformed partitioned into fuel products recovered uranium and various categories of waste Recycled material is stored until used by its assigned

reactor type VISION is comprised of several Microsoft Excel input files a Powersim Studio core and several Microsoft Excel output files All must be co located in the same folder on a PC to function You must use Powersim Studio 8 or better We have tested VISION with the Studio 8 Expert Executive and Education versions The Expert and Education versions work with the number of reactor types of 3 or less For more reactor types the Executive version is currently required The input files are Excel2003 format xls The output files are macro enabled Excel2007 format xlsx VISION 3 4 was designed with more flexibility than previous versions which were structured for only three reactor types LWRs that can use only uranium oxide UOX fuel LWRs that can use multiple fuel types LWR MF and fast reactors One could not have for example two types of fast reactors concurrently The new version allows 10 reactor types and any user defined uranium plutonium fuel is allowed Thorium based fuels can be input but several features of the model would not work The user identifies by year the primary fuel to be used for each reactor type The user can identify for each primary fuel a contingent fuel to use if the primary fuel is not available e g a reactor designated as using mixed oxide fuel MOX would have UOX as the contingent fuel Another example is that a fast reactor using recycled transuranic TRU material can be designated as either having or not having appropriately enriched uranium oxide as a contingent fuel Because of the need to study evolution in recycling and separation strategies the user can now select the recycling strategy and separation technology by year
