Potentials for Electric Vehicles in France, Germany, and India Kathrin Dudenhöffer,Rahul Arora,Alizée Diverrez,Axel Ensslen,Patrick Jochem,Jasmin Tücking,2014 As road transport is responsible for a major part of greenhouse gas emissions broad diffusion of electric vehicles EV in combination with electricity generated from clean energy sources can contribute to reducing overall CO2 emissions significantly EV include plug in hybrid electric vehicles PHEV and range extended electric vehicles REEV which still contain a combustion engine and hence do not restrict the user compared to conventional vehicles as well as pure battery electric vehicles BEV BEV will be focused in this article as the user behavior is affected considerably by a limited range and longer refueling times However with a current market penetration below 1 % the impact of BEV is marginal Although the sales figures of BEV are low all over the world it will be pointed out in this article that the potential for diffusion and take off of this new technology varies in different countries depending on some framework conditions like infrastructure and energy generation as well as on individual factors measured by surveys in the different

countries Hence this study tries to compare market potentials for BEV in different countries in order to improve the knowledge basis for decisions of policy makers Two Western countries France and Germany and one rapidly growing developing country India have been chosen In the first step of our analysis framework conditions are analyzed and compared which influence societies strategies as regards future developments of national passenger transport systems determining the future role of BEV This step focuses on economic differences greenhouse gas emissions national EV promotion programs differences in the underlying electric power system as well as passenger car stock and vehicle including motorized two wheeler registrations The second step concentrates on the differences in user acceptance of BEV in the three different nations Therefore consumers responses to internet questionnaires relating to BEV acceptance which were distributed in France Germany and India were compared With the help of variance analysis statistical differences of consumers statements in the three countries are determined The main result of the two step analysis is that France currently has the biggest market potential for BEV since the economic conditions and acceptance patterns in society are more beneficial for BEV than they are in Germany and India While the individuals BEV acceptance level seems to be comparably lower in Germany Indian framework conditions negatively influence the diffusion of BEV Thus it seems advantageous to start promoting BEV in France to focus on REEV and PHEV in Germany and to neglect promoting policies for four wheel EV in India in the next years However it seems necessary to support long term diffusion of EV in India considering the increasing sales figures of new vehicles and the corresponding challenges in Indian megacities
