City Cycling John Pucher, Ralph Buehler, 2012-10-19 A guide to today's urban cycling renaissance with information on cycling's health benefits, safety, bikes, and bike equipment, bike lanes, bike sharing, and other topics. Bicycling in cities is booming for many reasons: health and environmental benefits, time and cost savings, more and better bike lanes and paths, innovative bike sharing programs, and the sheer fun of riding. *City Cycling* offers a guide to this urban cycling renaissance with the goal of promoting cycling as sustainable urban transportation available to everyone. It reports on cycling trends and policies in cities in North America, Europe, and Australia and offers information on such topics as cycling safety, cycling infrastructure provisions including bikeways and bike parking, the wide range of bike designs and bike equipment, integration of cycling with public transportation, and promoting cycling for women and children. *City Cycling* emphasizes that bicycling should not be limited to those who are highly trained, extremely fit, and daring enough to battle traffic on busy roads. The chapters describe ways to make city cycling feasible, convenient, and safe for commutes to work and school, shopping trips, visits, and other daily transportation needs. The book also offers detailed examinations and illustrations of cycling conditions in different urban environments: small cities including Davis, California, and Delft, the Netherlands; large cities including Sydney, Chicago, Toronto, and Berlin; and megacities London, New York, Paris, and Tokyo. These chapters offer a closer look at how cities, both with and without historical cycling cultures, have developed cycling programs over time. The book makes clear that successful promotion of city cycling depends on coordinating infrastructure programs and government policies.

*International Encyclopedia of Transportation*, 2021-05-13 In an increasingly globalised world, despite reductions in costs and time, transportation has become even more important as a facilitator of economic and human interaction. This is reflected in technical advances in transportation systems, increasing interest in how transportation interacts with society, and the need to provide novel approaches to understanding its impacts. This has become particularly acute with the impact that Covid-19 has had on transportation across the world at local, national, and international levels. *Encyclopedia of Transportation*, Seven Volume Set, containing almost 600 articles, brings a cross-cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields including engineering, operations research, economics, geography, and sociology in order to understand the changes taking place. Emphasising the interaction between these different aspects of research, it offers new solutions to modern-day problems related to transportation. Each of its nine sections is based around familiar themes but brings together the views of experts from different disciplinary perspectives. Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines, different parts of the world, and different social perspectives. The nine sections are structured around the following themes: Transport Modes; Freight Transport and Logistics; Transport Safety and Security; Transport Economics; Traffic Management; Transport Modelling and Data Management; Transport Policy and Planning; Transport Psychology; Sustainability and Health Issues in Transportation. Some articles provide a technical introduction to a topic, whilst others provide a bridge between topics or a

more future oriented view of new research areas or challenges The end result is a reference work that offers researchers and practitioners new approaches new ways of thinking and novel solutions to problems All encompassing and expertly authored this outstanding reference work will be essential reading for all students and researchers interested in transportation and its global impact in what is a very uncertain world Provides a forward looking and integrated approach to transportation Updated with future technological impacts such as self driving vehicles cyber physical systems and big data analytics Includes comprehensive coverage Presents a worldwide approach including sets of comparative studies and applications

Recommended Bicycle Lane Widths for Various Roadway Characteristics Darren J. Torbic,2014 This report presents recommendations for bicycle lane widths for various roadway and traffic characteristics including traffic volume vehicle mix i e percent trucks land width and or total roadway width and presence absence of on street parking Foreword *Behavioral Models and Characteristics of Bicycle-automobile Mixed-traffic* Dean Brantley Taylor,Hani S. Mahmassani,1998 This report addresses an important need for fundamental understanding of bicycle automobile mixed traffic It presents models of 1 gap acceptance behavior and 2 bicyclist behavior at the onset of a yellow traffic signal indication in addition to analysis of 3 coordinating traffic signals to provide progression for both bicycles and automobiles Fundamental insights into mixed traffic behavior are derived and applied to selected problems in mixed traffic engineering and operations Discrete choice probit models are developed for both motorist and cyclist gap acceptance behavior An important fundamental insight from these models is that both cyclists and motorists require a longer gap when the gap is closed by a large vehicle e g bus and both will accept a shorter gap when the gap is closed by a bicycle relative to a gap closed by a passenger car A methodology for determining an adequate clearance interval for bicycles is developed from a deterministic model based on kinematic relations The bicyclists behavior at the onset of a yellow signal indication are obtained Finally a conceptual foundation consisting of three primary contributions is developed for analyzing bicycle automobile mixed traffic progression along signalized streets

**Motor Vehicles in the Environment** Paul Nieuwenhuis,Peter E. Wells,Peter Wells,1994 The motor industry is the largest manufacturing industry in the European Community US and Japan yet its products are among the most environmentally damaging Although public opinion in much of the industrialised world has turned green confusion still remains as to the implications for the motor industry Will the car survive and if so in what form Can we afford to do without the motor industry and can we distribute our goods without tracks Motor Vehicles in the Environment highlights a number of issues which form the basis of future legislation affecting the motor industry It offers a series of perspectives ranging from green governmental economic and marketing issues to the impact on a specific sector of the industry Prominent international experts analyse the implications of the green revolution for their specialist fields and areas of interest **A Comparative Analysis of Bicycle Lanes Versus Wide Curb Lanes: Final Report** William W. Hunter,1999 **Walcyng** ,1998 **A Comparative Analysis of Bicycle Lanes Versus Wide Curb Lanes** ,1999 This report is a comparative analysis of bicycle

lanes BLs versus wide curb lanes WCLs The primary analysis was based on videotapes of almost 4 600 bicyclists 2 700 riding in BLs and 1 900 in WCLs in the cities of Santa Barbara California Gainesville Florida and Austin Texas as the bicyclists approached and road through eight BL and eight WCL intersections with varying speed and traffic conditions The intent was to videotape bicyclists who regularly ride in traffic The videotapes were coded to learn about operational characteristics e g intersection approach position and subsequent maneuvers and conflicts with motor vehicles other bicycles or pedestrians
