Power Devices for Efficient Energy Conversion Gourab Majumdar, Ikunori Takata, 2018-04-17 The growth of power electronics centering on inverters and converters as its key system topology has accelerated recently due to the demand for efficient power conversion This growth has also been backed up by several evolutionary changes and breakthroughs achieved in the areas of power semiconductor device physics process technology and design However as power semiconductor technology remains a highly specialized subject the literature on further research development and design in related fields is not adequate With this in view two specialists of power semiconductors well known for their research and contributions to the field compiled this book as a review volume focusing on power chip and module technologies The prime purpose is to help researchers academia and engineers engaged in areas related to power devices and power electronics better understand the evolutionary growth of major power device components their operating principles design aspects application features and trends The book is filled with unique topics related to power semiconductors including tips on state of the art and futuristic oriented applications Numerous diagrams illustrations and graphics are included to adequately support the content and to make the book extremely attractive as a practical and user friendly reference book for researchers

Modular Multilevel Converters with Interleaved Half-Bridge Submodules Aleksandr Viatkin, 2023-03-29 This book reports on a comprehensive study on a novel high power converter i e a Modular Multilevel Converter with Interleaved Half bridge Submodules ISM MMC It describes in depth its average model the operating principles as well as a new control method and a hybrid modulation strategy that help to exploit the benefits of the interleaving scheme The new power converter is particularly advantageous for high current applications that require superb quality of input output waveforms Moreover this book reports on a systematic study of the current balancing problem between parallel connected units that commutate in non simultaneous fashion This is a typical issue in interleaved converters however here it is analyzed for the first time in relation to MMC based structures Two control strategies are proposed to cope with this matter By using a sensorless regulation scheme the number of required current transducers has been minimized reducing complexity cost and footprint of the hardware while providing converter with a fast and accurate current balancing This book also offers a comprehensive comparison between several practical designs of ISM MMC and classical MMC for an ultra fast electrical vehicle charger All in all it provides graduate students and researchers as well as field engineers and professionals with extensive information and essential practical details on the state of the art MMC and ISM MMC design
