Materials Science and Engineering Michael Ashby, Elizabeth Cope, David Cebon, 2013-07-10 This chapter describes a systematic methodology for optimized materials selection and informatics to support it The starting point is a set of technical requirements for component or subsystem These are translated into a set of limits or target values for material properties or property combinations material indices It is then possible given a comprehensive database of appropriate materials and their properties to screen materials against these criteria rank the remaining materials by their ability to maximize a target value of one or more indices and finally draw in other associated documentation to make an optimally informed decision The reasoning is made transparent by displaying the steps and the materials that pass and fail the screening steps on material property charts that present materials on axes of their properties or of the material indices The full decision making history can be captured and stored for traceability and future reference We give examples of selecting materials to minimize the mass and cost for ties panels and beams The method applies equally when the design objective is to minimize environmental impact or other criteria Beyond this the methodology can drive development of new materials that fill holes in property space The chapter concludes with an example focusing on new lightweight hybrid materials Materials and Process Selection for

Engineering Design, Third Edition Mahmoud M. Farag, 2013-11-19 Introducing a new engineering product or changing an existing model involves making designs reaching economic decisions selecting materials choosing manufacturing processes and assessing its environmental impact These activities are interdependent and should not be performed in isolation from each other This is because the materials and processes used in making the product can have a large influence on its design cost and performance in service Since the publication of the second edition of this book changes have occurred in the fields of materials and manufacturing Industries now place more emphasis on manufacturing products and goods locally rather than outsourcing Nanostructured and smart materials appear more frequently in products composites are used in designing essential parts of civilian airliners and biodegradable materials are increasingly used instead of traditional plastics More emphasis is now placed on how products affect the environment and society is willing to accept more expensive but eco friendly goods In addition there has been a change in the emphasis and the way the subjects of materials and manufacturing are taught within a variety of curricula and courses in higher education This third edition of the bestselling Materials and Process Selection for Engineering Design has been comprehensively revised and reorganized to reflect these changes In

addition the presentation has been enhanced and the book includes more real world case studies Materials and Process Selection for Engineering Design Mahmoud M. Farag, 2007-12-13 Taking a practical approach this work illustrates how design materials and process selection must mesh together and be considered along with economic and environmental analysis when developing a new product or changing an existing model It also considers the trade offs that must sometimes be made This second edition adds and revises topics such as environmental function and aesthetic considerations in design environmental impact assessment of materials and processes life cycle and recycling economics and materials substitution The book begins with an intro that reviews stages of product development This is followed by three sections covering Mechanical failures environmental degradation and materials that resist different types of failure Elements of engineering design and the effect of material properties and manufacturing processes on the design of components Economic and environmental aspects of materials and manufacturing processes as well as quantitative and computer assisted methods for screening ranking alternatives and deciding on the optimum material process combination Examples and detailed case studies illustrating practical applications as well as materials selection and substitution from a variety of industries are included Each chapter begins with clear objectives and ends with a summary review questions and bibliography Appendices supply tables of composition and properties and a glossary of technical terms SI units are used with Imperial units given when possible This student friendly text demonstrates how to balance design materials process selection and economic and environmental analysis to optimize manufacturing processes for a given component The author maintains a book website which features PowerPoint presentations for each chapter and access to a solutions manual for qualifying instructors Professor Faraq's book website Materials Selection in Mechanical Design Michael F.
