### As important as

This would be important to read if you allow someone else an opinion on what programming is, then we get started with it, and so on. This article contains only my own opinions, but necessarily they tend to have thoughtful views, or even correct in any way. We all discuss with other computers, and/or use an accelerated, balanced judgement of why other in the opinion.

It's also important to realize the purpose of this article: not to teach you how to program, but rather to teach you **what programming is**. That seems to be a common theme ignored by those who would teach you to program - they assume that you already have an idea of what programming is, why you'd want to do it, what's basically involved, and so on. This article answers all those questions for you, so you can then decide whether you want to start learning how to program.

What that is, well, let's begin.

### What is programming?

Given the general nature of that question, and the fact that programming is seen as a relatively complex subject, you're probably expecting a highly convoluted and technical answer. But you're not going to get one (and you're almost there). In truth, it's quite easy to say what programming is, so I will:

- **Programming is breaking a task down into small steps.**

That's just about the most formal and accurate answer I can give. It also has the added benefit of being concise - and sounding very much like something you'd find in an official book on the topic, then adding to my credibility.
