**Pluralism or Universalism in International Copyright Law** Tatiana Eleni Synodinou, 2019-10-24 In a world where powerful intermediaries like Google and Facebook are de facto regulators of the communication of copyright protected works the democratization of access to content has both substantially expanded the availability of new markets and dramatically increased copyright infringements Does this mean that the long sought ideal of a universal copyright regulation which would harmoniously combine effective protection of intellectual creations with public interest goals is a lost cause Taken together the contributions to this insightful and thoroughly researched book suggest that despite the prevailing labyrinthine mosaic of divergent national responses to fragmentation at international level the foundations of a universal approach can be found in the interaction of regional national and international copyright law instruments when responding to current and emerging technologies Emphasizing the adaptation of copyright law to the needs of the information society this volume provides critical approaches by leading copyright scholars on whether pluralism or universalism is the appropriate path to follow for the development of international copyright law The authors deal with such issues and topics as the following the application of core copyright law principles worldwide authorship rights and exceptions in the international copyright acquis Internet copyright enforcement global collective management of copyright copyright contracts database and design rights intermediary liability the global reach of the U S Fair Use doctrine World Intellectual Property Organization s role and strategy in international copyright lawmaking and bilateral trade and investment agreements involving copyright Specific evolutions and emerging trends in national and regional digital copyright laws are analyzed and assessed as they have developed in the European Union the United States Canada and Australia as well as in several Asian and African countries Throughout attention is paid to compatibility with the Berne Convention the perceived core of copyright law in the international copyright acquis and the key question of the

**Online Privacy Protection** ,2001 It is routinely acknowledged that the success of

the Internet and electronic commerce depends upon the resolution of issues related to the privacy of online personal information This paper discusses some potential threats to the privacy of online personal information and efforts by businesses governments and citizens to respond to them The paper also provides an overview of the legal framework for the protection of personal information The Constitution protects the privacy of personal information in a limited number of ways and extends only to the protection of the individual against government intrusions Any limitations placed on the data processing activities of the private sector will be found not in the Constitution but in federal or state law With the exception of the Children s Online Privacy Protection Act of 1998 none of these laws specifically covers the collection of online personal information The Commission issued a report to Congress in July 1999 on Self Regulation and Online Privacy and found that the vast majority of the sites surveyed collect personal information from consumers online and that the implementation of fair information practices is not widespread The FTC issued a new report in May 2000 after another survey of web sites Notwithstanding measurable gains since the 1999 report to Congress a majority of the Commission found that self regulation alone without some legislation is unlikely to provide online consumers with the level of protection they seek and deserve and recommended that Congress consider legislation to complement self regulation [Online Privacy Protection](#) Matthew Lee Sundquist,2013 Across the Web consumers annually share double the information they did the year before Use of smartphones wireless email and other technologies is also growing exponentially The U S government and businesses can do things that would have been impossible a few years ago For example the National Security Agency NSA can intercept and download electronic communications equivalent to the contents of the Library of Congress every six hours Regulatory inaction and a lack of rules or laws to regulate these practices allows more activity and potentially invasions of our privacy to happen faster and at a larger scale Regulatory and government responses have been slow ineffective or non existent The Supreme Court recently declined to address whether the police can electronically track citizens with a GPS device and declined to examine whether texting is private calling two way pagers an emerging technology Congress has not updated decades old privacy legislation and not reacted to what two Senators call secret interpretations of the USA PATRIOT Act Regulatory agencies have sought trivial concessions and non financial settlements with companies charged with breaking the law Meanwhile leaders struggle to grasp technology internet users struggle to grasp privacy decisions and trade offs and election focused politicians prefer solving problems to preventing them In this paper I review these problems while advancing a framework for determining when a legal or social response to a privacy threat is needed I also argue that privacy is an important societal value crucial to growing as individuals and creating relationships I claim we should prioritize privacy threats of three types law breaking if laws are insufficiently enforced and when laws or practices subvert valued social expectations of privacy As such we need better laws and precedents and better enforcement I apply this framework and point out specific areas for change *The Benefits and Costs of Online Privacy Legislation* Robert W. Hahn,Anne

Layne-Farrar,2013 Many people are concerned that information about their private life is more readily available and more easily captured on the Internet as compared to offline technologies Specific concerns include unwanted email credit card fraud identity theft and harassment This paper analyzes key issues surrounding the protection of online privacy It makes three important contributions First it provides the most comprehensive assessment to date of the estimated benefits and costs of regulating online privacy Second it provides the most comprehensive evaluation of legislation and legislative proposals in the U S aimed at protecting online privacy Finally it offers some policy prescriptions for the regulation of online privacy and suggests areas for future research After analyzing the current debate on online privacy and assessing the potential costs and benefits of proposed regulations our specific recommendations concerning the government s involvement in protecting online privacy include the following The government should fund research that evaluates the effectiveness of existing privacy legislation before considering new regulations The government should not generally regulate matters of privacy differently based on whether an issue arises online or offline The government should not require a Web site to provide notification of its privacy policy because the vast majority of commercial U S based Web sites already do so The government should distinguish between how it regulates the use and dissemination of highly sensitive information such as certain health records or Social Security numbers versus more general information such as consumer name and purchasing habits The government should not require companies to provide consumers broad access to the personal information that is collected online for marketing purposes because the benefits do not appear to be significant and the costs could be quite high The government should make it easier for the public to obtain information on online privacy and the tools available for consumers to protect their own privacy The message of this paper is not that online privacy should be unregulated but rather that policy makers should think through their options carefully weighing the likely costs and benefits of each proposal
