

10. For an ideal fluid flowing through a horizontal pipe, Bernoulli's principle and the continuity equation state that the pressure within the pipe does which of the following? (Assume measurements are taken along the pipe in the direction of fluid flow.)
- Pressure increases, then decreases as the pipe diameter increases.
 - Pressure increases as the pipe diameter increases.
 - Pressure decreases as the pipe diameter increases.
 - Pressure remains constant as the pipe diameter increases.
11. If an object is only partially submerged in a fluid, which of the following is true?
- The volume of the displaced fluid equals the volume of the object.
 - The density of the fluid is greater than the density of the object.
 - The density of the fluid equals the density of the object.
 - The density of the fluid is less than the density of the object.
12. Which of the following is *not* an example of units for expressing pressure?
- kg/m^2
 - N/m^2
 - psi
 - Pa
13. A water tunnel has a circular cross section where the diameter diminishes from 3.6 m to 1.2 m. If the velocity of water is 3.0 m/s in the larger part of the tunnel, what is the velocity of water in the smaller part of the tunnel?
- 9.0 m/s
 - 54 m/s
 - 18 m/s
 - 27 m/s
14. Which of the following statements about floating objects is correct?
- The displaced volume of fluid is greater than the volume of the object.
 - The object's density is equal to the density of the fluid on which it floats.
 - The object's density is greater than the density of the fluid on which it floats.
 - The buoyant force equals the object's weight.
15. Which of the following is *not* a fluid?
- carbon dioxide
 - hydrogen
 - wood
 - seawater
16. According to legend, to determine whether the king's crown was made of pure gold, Archimedes measured the crown's volume by determining how much water it displaced. The density of gold is 19.3 g/cm^3 . If the crown's mass was $6.00 \times 10^2 \text{ g}$, what volume of water would have been displaced if the crown was indeed made of pure gold?
- $22.8 \times 10^3 \text{ cm}^3$
 - $1.81 \times 10^3 \text{ cm}^3$
 - 31.1 cm^3
 - $114 \times 10^3 \text{ cm}^3$
17. Which of the following statements is true according to Pascal's principle?
- Pressure in a fluid is the same throughout the fluid.
 - Pressure in a fluid is greatest at the center of the fluid.
 - Pressure in a fluid is greatest at the walls of the container holding the fluid.
 - Pressure in a fluid is greatest at the top of the fluid.
18. Which of the following statements is *not* correct?
- A fluid flows.
 - A fluid has a definite shape.
 - Molecules of a fluid are free to move past each other.
 - A fluid changes its shape easily.

Holt Physics Chapter 8 Fluid Mechanics:

Holt Physics Raymond A. Serway,2002 Elliptic Marching Methods and Domain Decomposition Patrick J. Roache,1995-06-29 One of the first things a student of partial differential equations learns is that it is impossible to solve elliptic equations by spatial marching This new book describes how to do exactly that providing a powerful tool for solving problems in fluid dynamics heat transfer electrostatics and other fields characterized by discretized partial differential equations Elliptic Marching Methods and Domain Decomposition demonstrates how to handle numerical instabilities i e limitations on the size of the problem that appear when one tries to solve these discretized equations with marching methods The book also shows how marching methods can be superior to multigrid and pre conditioned conjugate gradient PCG methods particularly when used in the context of multiprocessor parallel computers Techniques for using domain decomposition together with marching methods are detailed clearly illustrating the benefits of these techniques for applications in engineering applied mathematics and the physical sciences **Holt Physics** ,2000-12 *Electrodynamics Of Particles And Plasmas* Phillip C Clemmow,2018-03-05 The classical electrodynamics of point charges has a long history There has arisen a new discipline now usually called plasma physics This book s aim is to present an account that would give the reader a firm theoretical grounding in the subject *Physics* Holt Rinehart & Winston,2000-12 Tstgen Holt Rinehart & Winston,1998-04 **Cellular Automata And Complexity** Stephen Wolfram,2018-03-08 Are mathematical equations the best way to model nature For many years it had been assumed that they were But in the early 1980s Stephen Wolfram made the radical proposal that one should instead build models that are based directly on simple computer programs Wolfram made a detailed study of a class of such models known as cellular automata and discovered a remarkable fact that even when the underlying rules are very simple the behaviour they produce can be highly complex and can mimic many features of what we see in nature And based on this result Wolfram began a program of research to develop what he called A Science of Complexity The results of Wolfram s work found many applications from the so called Wolfram Classification central to fields such as artificial life to new ideas about cryptography and fluid dynamics This book is a collection of Wolfram s original papers on cellular automata and complexity Some of these papers are widely known in the scientific community others have never been published before Together the papers provide a highly readable account of what has become a major new field of science with important implications for physics biology economics computer science and many other areas

Thermodynamics and Fluid Mechanics Convention, 1966 ,1966 **Computational Techniques for Fluid Dynamics 1** Clive Fletcher,1988-10-13 The purpose of this two volume textbook is to provide students of engineer ing science and applied mathematics with the specific techniques and the framework to develop skill in using them that have proven effective in the various branches of computational fluid dynamics CFD Volume 1 de scribes both fundamental and general techniques that are relevant to all branches of fluid flow Volume 2 provides specific techniques applicable to the

different categories of engineering flow behaviour many of which are also appropriate to convective heat transfer An underlying theme of the text is that the competing formulations which are suitable for computational fluid dynamics e.g. the finite difference finite element finite volume and spectral methods are closely related and can be interpreted as part of a unified structure Classroom experience indicates that this approach assists considerably the student in acquiring a deeper understanding of the strengths and weaknesses of the alternative computational methods Through the provision of 24 computer programs and associated examples and problems the present text is also suitable for established research workers and practitioners who wish to acquire computational skills without the benefit of formal instruction The text includes the most up to date techniques and is supported by more than 300 figures and 500 references
