Statistical Methods for the Social Sciences: Pearson New International Edition Alan Agresti, Barbara Finlay, 2013-08-27

The book presents an introduction to statistical methods for students majoring in social science disciplines. No previous knowledge of statistics is assumed and mathematical background is assumed to be minimal, lowest level high school algebra. The book contains sufficient material for a two semester sequence of courses. Such sequences are commonly required of social science graduate students in sociology, political science, and psychology. Students in geography, anthropology, journalism, and speech also are sometimes required to take at least one statistics course. Datasets and other resources where applicable for this book are available here. **Statistical Methods for the Social Sciences** Agresti, 2006-01-01 *Statistical Methods for the Social Sciences* Alan Agresti, Barbara Finlay, 2013-07-30. The fourth edition has an even stronger emphasis on concepts and applications with greater attention to real data both in the examples and exercises. The mathematics is still downplayed in particular probability which is all too often a stumbling block for students. On the other hand the text is not a cookbook. Reliance on an overly simplistic recipe based approach to statistics is not the route to good statistical practice. Changes in the Fourth Edition: Since the first edition the increase in computer power coupled with the continued improvement and accessibility of statistical software has had a major impact on the way social scientists analyze data. Because of this this book does not cover the traditional shortcut hand computational formulas and approximations. The presentation of computationally complex methods such as regression emphasizes interpretation of software output rather than the formulas for performing the analysis. The text contains numerous sample printouts mainly in the style of SPSS and occasionally SAS both in chapter text and homework problems. This edition also has an appendix explaining how to apply SPSS and SAS to conduct the methods of each chapter and a website giving links to information about other software.
