BPMN has had a checkered history which we believe reflects the complexity it seeks to standardise. Process models are much older than the kind of models that UML tried to standardize. These UML models often have a much more intimate relationship with software development. We can trace process models back to Frederick Winslow Taylor who was one of the first to attempt to look at production processes in a scientific way. This happened in the 19th century at a time when people had unwavering faith in the ability of science and technology to solve all problems. Before you can proceed to control, improve or even innovate the processes of your organization, it is important to provide insight into the processes. How do you ensure that the knowledge of individuals comes together and is transferable and accessible to the entire organization? As a modeling language, BPMN offers a standard for communicating about business processes. BPMN Modeling and Reference Guide Stephen A. White, Derek Miers, 2008-01-01. Business Process Modeling Notation (BPMN) is a standard graphical modeling representation for business processes. It provides an easy-to-use flow charting notation that is independent of the implementation environment. An underlying rigor supports the notation, facilitating the translation of business level models into executable models that BPM Suites and workflow engines can understand. Over recent years, BPMN has been widely adopted by Business Process Management (BPM) related products, both the Business Process Analysis and Modeling tool vendors and the BPM Suites. This book is for business users and process modeling practitioners alike. Part I provides an easily understood introduction to the key components of BPMN put forward in a user-friendly fashion. Starting off with simple models, it progresses into more sophisticated patterns. Exercises help cement comprehension and understanding, with answers available online. Part II provides a detailed and authoritative reference on the precise semantics and capabilities of the standard.

A Rigorous Semantics for BPMN 2.0 Process Diagrams Felix Kossak, Christa Illibauer, Verena Geist, Jan Kubovy, Christine Natschläger, Thomas Ziebermayr, Theodorich Kopetzky, Bernhard Freudenthaler, Klaus-Dieter Schewe, 2015-02-04. This book provides the most complete formal specification of the semantics of the Business Process Model and Notation 2.0 standard. BPMN is available to date in a style that is easily understandable for a wide range of readers, not only for experts in formal methods but e.g. also for developers of modeling tools, software architects or graduate students specializing in business process management. BPMN, issued by the Object Management Group, is a widely used standard for business process modeling. However, major drawbacks of BPMN include its limited support for organizational modeling, its only implicit expression of modalities and its lack of integrated user interaction and data modeling. Further, in many cases the syntactical and in particular semantic definitions of BPMN are inaccurate, incomplete or inconsistent. The book addresses concrete issues concerning the execution semantics of business processes and provides a formal definition of BPMN process diagrams which can serve as a sound basis for further extensions, i.e. in the form of horizontal refinements of the core language. To this end, the Abstract State Machine (ASM) method is used to formalize the semantics of BPMN. ASMs have

demonstrated their value in various domains e.g specifying the semantics of programming or modeling languages verifying the specification of the Java Virtual Machine or formalizing the ITIL change management process This kind of improvement promotes more consistency in the interpretation of comprehensive models as well as real exchangeability of models between different tools In the outlook at the end of the book the authors conclude with proposing extensions that address actor modeling including an intuitive way to denote permissions and obligations integration of user centric views a refined communication concept and data integration
