Business Intelligence Strategy and Big Data Analytics Steve Williams, 2016-04-08 Business Intelligence Strategy and Big Data Analytics is written for business leaders managers and analysts people who are

involved with advancing the use of BI at their companies or who need to better understand what BI is and how it can be used to improve profitability. It is written from a general management perspective and it draws on observations at 12 companies whose annual revenues range between 500 million and 20 billion. Over the past 15 years, my company has formulated vendor neutral, business-focused BI strategies and program execution plans in collaboration with manufacturers, distributors, retailers, logistics companies, insurers, investment companies, credit unions, and utilities among others. It is through these experiences that we have validated business-driven BI strategy formulation methods and identified common enterprise BI program execution challenges. In recent years, terms like big data and big data analytics have been introduced into the business and technical lexicon. Upon close examination, the newer terminology is about the same thing that BI has always been about: analyzing the vast amounts of data that companies generate and/or purchase in the course of business as a means of improving profitability and competitiveness. Accordingly, we will use the terms BI and business intelligence throughout the book, and we will discuss the newer concepts like big data as appropriate. More broadly, the goal of this book is to share methods and observations that will help companies achieve BI success and thereby increase revenues, reduce costs, or both. Provides ideas for improving the business performance of one's company or business functions. Emphasizes proven, practical, step-by-step methods that readers can readily apply in their companies. Includes exercises and case studies with road-tested advice about formulating BI strategies and program plans.

Business Analytics for Beginners and Dummies Lisa H Gregory Ph D, 2021-01-18 In the era of knowledge economy getting the right information to decision makers at the right time is critical to their business success One such attempt includes the growing use of business analytics Generally speaking business analytics refers to a broad use of various quantitative techniques such as statistics data mining optimization tools and simulation supported by the query and reporting mechanism to assist decision makers in making more informed decisions within a closed loop framework seeking continuous process improvement through monitoring and learning Business analytics also helps the decision maker predict the future

business activities based on the analysis of historical patterns of past business activities For example your nearby grocery chain such as Kroger might frequently issue discount coupons tailored for each customer based on his past shopping patterns This practice encourages the customer to consider buying the discounted but favorite items repeatedly while building customer loyalty This practice is possible since a smart use of business analytics allows the grocery store to figure out which items are likely to be purchased by which customer in his next grocery shopping trip Likewise application potentials of business analytics are enormous given the abundant data available from the digital and mobile data sources Although business analytics has been rapidly gaining popularity among practitioners and academicians alike in the recent past its conceptual foundation has existed for centuries One of the first forms of business analytics may be statistics whose uses can be traced back at least to the biblical times in ancient Egypt Babylon and Rome The word analytics has come into the foreground in last decade or so The proliferation of the internet and information technology has made analytics very relevant in the current age Analytics is a field which combines data information technology statistical analysis quantitative methods and computer based models into one This all are combined to provide decision makers all the possible scenarios to make a well thought and researched decision The computer based model ensures that decision makers are able to see performance of decision under various scenarios Business analytics has a wide range of application from customer relationship management financial management and marketing supply chain management human resource management pricing and even in sports through team game strategies
