**Business Continuity in a Cyber World** David Sutton, 2018-06-26 Until recently if it has been considered at all in the context of business continuity cyber security may have been thought of in terms of disaster recovery and little else Recent events have shown that cyber attacks are now an everyday occurrence and it is becoming clear that the impact of these can have devastating effects on organizations whether large or small public or private sector Cyber security is one aspect of information security since the impacts or consequences of a cyber attack will inevitably damage one or more of the three pillars of information security the confidentiality integrity or availability of an organization's information assets The main difference between information security and cyber security is that while information security deals with all types of information assets cyber security deals purely with those which are accessible by means of interconnected electronic networks including the Internet Many responsible organizations now have robust
