*Machine Learning Essentials* Alboukadel Kassambara, 2018-03-10 Discovering knowledge from big multivariate data recorded every day requires specialized machine learning techniques This book presents an easy to use practical guide in R to compute the most popular machine learning methods for exploring real world data sets as well as for building predictive models The main parts of the book include

- A Unsupervised learning methods to explore and discover knowledge from a large multivariate data set using clustering and principal component methods You will learn hierarchical clustering k means principal component analysis and correspondence analysis methods
- B Regression analysis to predict a quantitative outcome value using linear regression and non linear regression strategies
- C Classification techniques to predict a qualitative outcome value using logistic regression discriminant analysis naive bayes classifier and support vector machines
- D Advanced machine learning methods to build robust regression and classification models using k nearest neighbors methods decision tree models ensemble methods bagging random forest and boosting
- E Model selection methods to select automatically the best combination of predictor variables for building an optimal predictive model These include best subsets selection methods stepwise regression and penalized regression ridge lasso and elastic net regression models We also present principal component based regression methods which are useful when the data contain multiple correlated predictor variables
- F Model validation and evaluation techniques for measuring the performance of a predictive model
- G Model diagnostics for detecting and fixing a potential problems in a predictive model

The book presents the basic principles of these tasks and provide many examples in R This book offers solid guidance in data mining for students and researchers
