The BS 9999 Handbook Michael Green (chartered engineer.),Jonathan Joinson,1910-05-21 Fire safety in buildings Fire safety Risk assessment Management Buildings by fire risk categories Means of escape from fire in buildings Crowd safety Fire escape routes Emergency exits Emergency lighting Circulation and space systems buildings Structural fire protection Fire spread prevention Fire resistant materials Fire doors Hazard prevention in buildings Firefighting Fire alarms Lifts Atria buildings Assembly facilities Seating Buildings open to the public Shops buildings Shopping centres Disabled people

Means of Escape from Fire M. J. Billington,Alex Copping,Anthony Ferguson,2008-04-15 The provision of an adequate means of escape from fire is fundamental to the design of new buildings and to the alteration change of use or extension of existing buildings It is essential that means of escape are considered at the earliest stage of a project as mistakes are very expensive to correct later in the design There is a great deal of legislation on means of escape design and control but this is scattered throughout a large number of statutes regulations and guidance documents Many buildings need to be licensed and or registered as well as requiring certification and Building Regulation compliance This book provides an invaluable reference on the subject for architects surveyors and building control officers It identifies the legislation which applies to any particular building use describes the general principles of designing means of escape together with a ten step approach for a range of residential and non residential buildings considers alternative design options based on fire safety engineering outlines fire safety management in premises in use as an aid to employers who have a statutory duty to undertake fire risk assessments

Architect's Legal Handbook Anthony Speaight QC,2021-01-28 The Architect s Legal Handbook is the most widely used reference on the law for practicing architects and the established textbook on law for architectural students Since the last edition of this book in 2010 the legal landscape in which architecture is practised has changed significantly the long standing procurement model with an architect as contract administrator has been challenged by the growing popularity of design and build contracts contract notices in place of certificates and novation of architect s duties The tenth edition features all the latest developments in the law which affect an architect s work as well as providing comprehensive coverage of relevant UK law topics Key highlights of this edition include an overview of the legal environment including contract tort and land law analysis of the statutory framework including planning law health and safety construction legislation and building regulations in the post Grenfell legal landscape procurement and the major industry construction contract forms building dispute resolution including litigation arbitration adjudication and mediation key fields for the architect in practice including architects registration and professional conduct contracts with clients and collateral warranties liability in negligence and insurance entirely new chapters on various standard form contracts architects responsibility for the work of others disciplinary proceedings and data protection tables of cases legislation statutes and statutory instruments give a full overview of references cited in the text The Architect s Legal Handbook is the essential legal

reference work for all architects and students of architecture **Applications of Fire Engineering** Martin Gillie, Yong Wang, 2017-09-06 This book holds the proceedings of the Conference on Applications of Structural Fire Engineering ASFE 2017 held on September 7 8 2017 in Manchester UK The ASFE 17 conference will be the next in a series 2009 2011 2013 2015 of successful conferences that aim to bring together experts and specialists in design against fire from all over the world to share ideas and to acquire knowledge in the field of structural fire engineering Practice in structural engineering increasingly accepts the benefits of performancebased approaches to the design of structures for fire resistance This conference will focus on the application of design methods both manual and computational for structures to resist fire Particularly relevant themes will be fire modelling simulation of the heat transfer between fire and structures and modelling of structural behaviour at elevated temperatures using numerical methods or software implementations of design codes
