Business Process Management (BPM) Bernhard Hitpass, 2014-07-07 Nowadays an organization is expected to be not only effective and efficient as it was formerly Now in addition it should be able to adapt to the frequent changes driven by globalization let us say be agile This business agility has become more important in these times of globalization The organization that best respond to the fast changing market which is becoming increasingly frequent will have better competitive advantages than those that fail to sustain the pace imposed by globalization What are the tools that organizations are using to better achieving agility effectiveness and efficiency The answer is more control and efficiency with the ability to manage change in their business processes because these can create value for customers BPM is an integrative discipline that comprises management disciplines and techniques It involves the business layers and technology including also management through processes as an integrated whole The structure of this book consists of two parts Part I Fundamentals of BPM describe the state of the art of the major BPM theoretical concepts Part II Implementation for BPM is dedicated to presenting the concepts of implementation developed largely by the author This second part considers the technological support in each of the BPM layers The author shows how to implement the core principles of the discipline which differs itself from traditional management This book is for all professionals whether they perform in the public private or non profits sectors who require or want to learn more about this process management discipline It is also for students and academics of the industrial and computer sciences and to all the business and administration Schools

Modern Business Process Automation Arthur H. M. ter Hofstede, Wil M. P. van der Aalst, Michael Adams, Nick Russell, 2009-11-18 The eld of Business Process Management BPM is marred by a seemingly e less sequence of proposed industry standards Contrary to other elds e g civil or electronic engineering these standards are not the result of a widely supported consolidation of well understood and well established concepts and practices In the BPM

domain it is frequently the case that BPM vendors opportunistically become involved in the creation of proposed standards to exert or maintain their influence and interests in the field. Despite the initial fervor associated with such standardization activities it is no less frequent that vendors either choose to drop their support for standards that they earlier championed on an opportunistic basis or elect only to partially support them in their commercial offerings. Moreover the results of the standardization processes themselves are a concern. BPM standards tend to deal with complex concepts yet they are never properly defined and all too often not informed by established research. The result is a plethora of languages and tools with no consensus on concepts and their implementation. They also fail to provide clear direction in the way in which BPM standards should evolve. One can also observe a dichotomy between the business side of BPM and its technical side. While it is clear that the application of BPM will fail if not placed in a proper business context it is equally clear that its application will go nowhere if it remains merely a motivational exercise with schemas of business processes hanging on the wall gathering dust.

Fundamentals of Business Process Management Marlon Dumas, Marcello La Rosa, Jan Mendling, Hajo A.

Reijers, 2018-03-23 This textbook covers the entire Business Process Management BPM lifecycle from process identification to process monitoring covering along the way process modelling analysis redesign and automation. Concepts methods and tools from business management computer science and industrial engineering are blended into one comprehensive and interdisciplinary approach. The presentation is illustrated using the BPMN industry standard defined by the Object Management Group and widely endorsed by practitioners and vendors worldwide. In addition to explaining the relevant conceptual background the book provides dozens of examples more than 230 exercises many with solutions and numerous suggestions for further reading. This second edition includes extended and completely revised chapters on process identification process discovery qualitative process analysis process redesign process automation and process monitoring. A new chapter on BPM as an enterprise capability has been added which expands the scope of the book to encompass topics such as the strategic alignment and governance of BPM initiatives. The textbook is the result of many years of combined teaching experience of the authors both at the undergraduate and graduate levels as well as in the context of professional training. Students and professionals from both business management and computer science will benefit from the step by step style of the textbook and its focus on fundamental concepts and proven methods. Lecturers will appreciate the class tested format and the additional teaching material available on the accompanying website.

Business Process Management Mathias Weske,2024-07-13 In this book Mathias Weske details the complete business process lifecycle from process modeling to process enactment and process evaluation After starting with the general foundations and abstractions in business process management he introduces process modeling languages and process choreographies as well

as formal properties of processes and data. Eventually he presents both traditional and advanced business process management architectures covering for example workflow management systems, service oriented architectures and data driven approaches. The 4th edition of his book contains significant updates including a new section on directly follows graphs that play a crucial role in process mining. In addition the core of declarative process modeling is introduced. The increasingly important role of data in business processes is addressed by a new section on data objects and data models in the data and decision chapter. To cover a recent trend in process automation the enterprise systems architecture chapter now includes a section on robotic process automation. Mathias Weske argues that all communities involved need to have a common understanding of the different aspects of business process management. Hence his textbook is ideally suited for classes on business process management, information systems architecture and workflow management alike.
