**Lagrangian methods based on the trajectories of penalty and barrier functions** Stanford University. Systems  
Optimization Laboratory,1978 This report contains a complete derivation and description of two algorithms for nonlinearly  
constrained optimization which are based on properties of the solution trajectory of the quadratic penalty function and the  
logarithmic barrier function The methods utilize the penalty and barrier functions only as merit functions and do not  
generate iterates by solving a sequence of ill conditioned problems The search direction is the solution of a simple well posed  
quadratic program QP where the quadratic objective function is an approximation to the Lagrangian function the steplength  
is based on a sufficient decrease in a penalty or barrier function to ensure progress toward the solution The penalty  
trajectory algorithm was first proposed by Murray in 1969 the barrier trajectory algorithm which retains feasibility  
throughout was given by Wright in 1976 Here we give a unified presentation of both algorithms and indicate their  
relationship to other QP based methods Full details of implementation are included as well as numerical results that display  
the success of the methods on non trivial problems Author
