Understanding Development Economics Adam Fforde, 2014-01-03 Important parts of development practice especially in key institutions such as the World Bank are dominated by economists In contrast Development Studies is largely based upon multidisciplinary work in which anthropologists human geographers sociologists and others play important roles Hence a tension has arisen between the claims made by Development Economics to be a scientific measurable discipline prone to wide usage of mathematical modelling and the more discursive practice based approach favoured by Development Studies The aim of this book is to show how the two disciplines have interacted as well as how they differ This is crucial in forming an understanding of development work and to thinking about why policy recommendations can often lead to severe and continuing problems in developing countries This book introduces Development Economics to those coming from two different but linked perspectives economists and students of development who are not economists In both explaining and critiquing Development Economics the book is able to suggest the implications of these findings for Development Studies and more broadly for development policy and its outcomes

**Development Economics** Debraj Ray, 1998-01-12 A landmark textbook on development economics The study of development in low income countries is attracting more attention around the world than ever before Yet until now there has been no comprehensive text that incorporates the recent huge strides made in the subject Development Economics does precisely that in a clear rigorous and elegant fashion Debraj Ray one of the most accomplished theorists in development economics today presents in this book a synthesis of recent and older literature in the field and raises important questions that will help to set the agenda for future research He covers such vital subjects as theories of economic growth economic inequality poverty and undernutrition population growth trade policy and the markets for land labor and credit A common point of view underlies the treatment of these subjects that much of the development process can be understood by studying factors that impede the efficient and equitable functioning of markets Diverse topics such as the new growth theory moral hazard in land contracts information based theories of credit markets and the macroeconomic implications of economic inequality come under this common methodological umbrella The book takes the position that there is no single cause for economic progress but that a combination of factors among them the improvement of physical and human capital the reduction of inequality and institutions that enable the background flow of information essential to market performance consistently favor development Ray supports his arguments throughout with examples from around the world The book assumes a knowledge of only introductory economics and explains sophisticated concepts in simple direct language keeping the use of mathematics to a minimum Development Economics will be the definitive textbook in this subject for years to come It will prove useful to researchers by showing intriguing connections among a wide variety of subjects that are rarely discussed together in the same book And it will be an important resource for policy makers who increasingly find themselves dealing with complex issues of growth inequality poverty and social welfare
