Deep Learning How The Mind Overrides Experience:

Deep Learning Stellan Ohlsson,2011 Although the ability to retain process and project prior experience onto future situations is indispensable the human mind also possesses the ability to override experience and adapt to changing circumstances Cognitive scientist Stellan Ohlsson analyzes three types of deep non monotonic cognitive change creative insight adaptation of cognitive skills by learning from errors and conversion from one belief to another incompatible belief For each topic Ohlsson summarizes past research re formulates the relevant research questions and proposes information processing mechanisms that answer those questions The three theories are based on the principles of redistribution of activation specialization of practical knowledge and re subsumption of declarative information Ohlsson develops the implications of those mechanisms by scaling their effects with respect to time complexity and social interaction The book ends with a unified theory of non monotonic cognitive change that captures the abstract properties that the three types of change share

Cognition Beyond the Brain Stephen J. Cowley, Frédéric Vallée-Tourangeau, 2017-03-28 This book challenges neurocentrism by advocating a systemic view of cognition based on investigating how action shapes the experience of thinking placing interactivity at its heart This systemic viewpoint makes three main claims First that many elaborate cognitive skills like language problem solving and human computer interaction HCI are based in sense saturated coordination or interactivity Second interactivity produces a tightly woven scaffold of resources some internal to the agent and others external that elevates and transforms thinking Third human agents entwine brains bodies and their surroundings as they manage multi scalar dynamics This new edition continues to demonstrate how a systemic perspective casts a productive light on thinking in applied domains such as crime scene analysis the use of information technology in construction and computer mediated trusts and presents new studies on the cognitive ecology of the web multi scalar temporal and organisational cognition and the importance of interactive material engagement in digital architecture Authors use various scales of the systemic viewpoint to illustrate how bodies and artefacts shape thinking but in all cases the experience of materiality is meshed with activity that involves the world beyond the body

Cognition Beyond the Brain is a valuable reference for researchers practitioners and graduate students within the fields of Computer Science Psychology Linguistics and Cognitive Sciences
