Engineering Design with Polymers and Composites James C. Gerdeen, PhD, PE, James C. Gerdeen, Harold W. Lord, Ronald A.L. Rorrer, PhD, PE, Ronald A.L. Rorrer, 2005-11-01 There are many books available on polymer chemistry properties and processing but they do not focus on the practicalities of selecting and using them correctly in the design of structures Engineering students require an understanding of polymers and composites as well as viscoelasticity adhesion damping applications and tribology in order to successfully integrate these materials into their designs Based on more than twenty years of classroom experience Engineering Design with Polymers and Composites is the first textbook to unite these topics in a single source The authors take a bottom up functional approach rather than a top down analytical approach to design This unique perspective enables students to select the proper materials for the application rather than force the design to suit the materials The text begins with an introduction to polymers and composites including historical background Detailed coverage of mechanical properties viscoelastic behavior of polymers composite materials creep and fatigue failure impact and related properties follows Discussion then turns to selection of materials design applications of polymers polymer processing adhesion tribology and damping and isolation Abundant examples homework problems tables and illustrations reinforce the concepts Accompanied by a CD ROM containing materials databases examples in Excel and a laminate analysis program Engineering Design with Polymers and Composites builds a strong background in the underlying concepts necessary for engineering students to successfully incorporate polymers and composites into their designs

Engineering Design with Polymers and Composites James C. Gerdeen PhD PE, Ronald A.L. Rorrer PhD PE, 2011-12-19 Engineering Design with Polymers and Composites Second Edition continues to provide one of the only textbooks on the analysis and design of mechanical components made from polymer materials It explains how to create polymer materials to meet design specifications After tracing the history of polymers and composites the text describes modern des

Design and Analysis of Composite Structures Christos Kassapoglou, 2013-04-23 New edition updated with additional exercises and two new chapters Design and Analysis of Composite Structures With Applications to Aerospace Structures 2nd Edition builds on the first edition and includes two new chapters on composite fittings and the design of a composite panel as well additional exercises The book enables graduate students and engineers to generate meaningful and robust designs of complex composite structures A compilation of analysis and design methods for structural components made of advanced composites it begins with simple parts such as skins and stiffeners and progresses through to applications such as entire components of fuselages and wings It provides a link between theory and day to day design practice using theory to derive solutions that are applicable to specific structures and structural details used in industry Starting with the basic mathematical derivation followed by simplifications used in real world design Design and Analysis of Composite

Structures With Applications to Aerospace Structures 2nd Edition presents the level of accuracy and range of applicability of each method along with design guidelines derived from experience combined with analysis The author solves in detail examples taken from actual applications to show how the concepts can be applied solving the same design problem with different methods based on different drivers e g cost or weight to show how the final configuration changes as the requirements and approach change Each chapter is followed by exercises that represent specific design problems often encountered in the aerospace industry but which are also applicable in the in the automotive marine and construction industries Updated to include additional exercises that represent real design problems encountered in the aerospace industry but which are also applicable in the in the automotive marine and construction industries Includes two new chapters One on composite fittings and another on application and the design of a composite panel Provides a toolkit of analysis and design methods that enable engineers and graduate students to generate meaningful and robust designs of complex composite structures Provides solutions that can be used in optimization schemes without having to run finite element models at each iteration thus speeding up the design process and allowing the examination of many more alternatives than traditional approaches Supported by a complete set of lecture slides and solutions to the exercises hosted on a companion website for instructors An invaluable resource for Engineers and graduate students in aerospace engineering as well as Graduate students and engineers in mechanical civil and marine engineering Composite Materials in Engineering Design Bryan R. amounts of agriculture residual The book is divided into four sections covering applications of natural fiber polymer composites design of natural fiber polymer composites composite manufacturing techniques and agriculture waste manufacturing composite material testing methods The first section of the book deals with the application of textile composites in the industry and the properties of the natural fibers providing an understanding of the history of natural fiber composites as well as an analysis of the different properties of different natural fibers The second section goes on to explain the textile composites their classification different composite manufacturing techniques and the different pretreatment methods for the natural fibers to be used in composite formation It also analyzes the composite material design under different types of loading and the mechanism of failure of the natural fiber composite The effect of the fiber volume fraction of different textile structures is explained The third section of the book on composite manufacturing techniques and agriculture waste manufacturing concerns the natural fiber composite manufacturing techniques agricultural waste and the methods of their preparation to be used successfully in the composite either in the form of fibers particles or nanoparticles The book then considers the testing methods of the different composite components as well as the final composite materials giving the principle of the testing standards either destructive or nondestructive This book attempts to fill the gap between the role of the textile engineer and the role of the designer of composites from natural fibers It provides important information on the application of textile composites for textile engineers materials engineers and researchers in the area of composite materials
