## CORE DRILLING

Core drilling can be considered both a geological and geophysical technique and can be used to determine the true vertical orientation of a target. The information and accuracy of the results are the foundation of seismic. Core drilling also provides the location of structural trap potential. Core drills are used frequently to measure aquifer thickness where the seismic may be skewed (caused by ground movement) due to depth. The two locations are connected and measured by continuous and geophysical to determine geophysical (seismic) and geophysical (seismic) data. Seismic methods are the most significant and costly methods employed throughout exploration since they are usually every second.

## SEISMIC

Seismic techniques have recently had a major impact on the industry. They are used to determine the true vertical orientation of a target. The information and accuracy of the results are the foundation of seismic. Core drilling also provides the location of structural trap potential.
