Collin Hal Amick, 2004      The British National Bibliography Arthur James Wells, 2000      Modified Sheet Pile Abutments for  
Low-volume Road Bridges Ryan Richard Evans, Wayne Klaiber, 2012 To date there have been few investigations of the  
substructures in low volume road LVR bridges Steel sheet piling has the potential to provide an economical alternative to  
concrete bridge abutments but it needs investigation with regard to vertical and lateral load resistance construction methods  
and performance monitoring The objectives of this project were to develop a design approach for sheet pile bridge abutments  
for short span low volume bridges formulate an instrumentation and monitoring plan to evaluate performance of sheet pile  
abutment systems and understand the cost and construction effort associated with building the sheet pile bridge abutment  
demonstration project Three demonstration projects Boone Blackhawk and Tama Counties were selected for the design  
construction and monitoring of sheet pile abutments bridges Each site was unique and required site specific design and  
instrumentation monitoring The key findings from this study include the following 1 sheet pile abutment bridges provide an  
effective solution for LVR bridges 2 the measured stresses and deflection were different from the assumed where the  
differences reflect conservatism in the design and the complex field conditions and 3 additional research is needed to  
optimize the design      Seasonal Instrumentation of SHRP Pavements, the Ohio State University William Edward Wolfe, 1998  
Environmental instruments to measure temperature soil moisture and frost depth were installed at five test sections of the  
SHRP pavement project on U S 23 north of Delaware Ohio At three of these locations tensiometers which a designed to  
measure negative pore pressures were added to the instrumentation package The pore pressures as recorded by the  
tensiometers have increased from initially negative to positive values at each location and throughout the profile in the first  
year after installation of the instrument package was completed At the same time data collected from the moisture probes  
were showing a corresponding increase in soil moisture content Samples of an aggregate base and clayey subgrade material  
were collected at several locations on the DEL 23 project by ODOT They were delivered to the OSU soil mechanics laboratory  
for classification and permeability determination The aggregate base conformed to ODOT material specification Item 304  
Measured permeability coefficients ranged between  $2 \times 10^{-6}$  to the minus 2 and  $2.9 \times 10^{-6}$  to the minus 2 cm sec The clayey  
material was classified as a low plasticity clay AASHTO Classification A 6 to A 7 6 with permeability coefficients ranging  
between  $1 \times 10^{-6}$  to the minus 6 and  $4 \times 10^{-6}$  to the minus 8 cm sec
