of Cisco devices e g routers and switches has traditionally been performed at the command line However an industry wide paradigm shift is now underway where more and more configuration is being performed by software an approach commonly referred to as Software Defined Networking SDN SDN is an emerging architecture that makes it easier and more cost effective to implement network policies and manage network resources It does this by decoupling the network control from the network hardware which continues to manage forwarding functions allowing network control to become directly programmable and the underlying network infrastructure to be managed by applications and network services rather than individually configured Network Programmability Fundamentals LiveLessons introduces the theory surrounding SDN

networks and examines components found in a Cisco ACI network. Additionally, this course covers Python programming, a key skill required for network programmability. Finally, this course walks through multiple network programmability exercises which can be performed for free at Cisco's DevNet site Resource description page **Business Periodicals Index**, 1989

Study Guide on Automating and Programming Cisco Data Center Solutions (300-635 DCAUTO) Exam Anand Vemula, The Cisco 300-635 DCAUTO certification focuses on automation and programmability within Cisco Data Center technologies, particularly Cisco ACI NX-OS and UCS environments. The exam covers fundamental knowledge of Cisco's Unified Data Center Architecture and dives deep into key components such as the Application Policy Infrastructure Controller (APIC), Leaf and Spine switches in ACI, and the role of Cisco UCS with its management platforms including Cisco Intersight. Central to the certification is understanding the ACI policy model, which uses tenants, bridge domains, and endpoint groups (EPGs) to logically segment and control network traffic. Mastery of the ACI object model and REST API is essential, enabling candidates to programmatically manage and automate network policies. The exam also emphasizes practical skills in NX-OS programmability, contrasting traditional CLI with modern NX-API REST and CLI methods, and highlights the importance of Python scripting alongside NETCONF and RESTCONF protocols. Cisco UCS programmability is explored through UCS Manager's XML APIs, Cisco Intersight's cloud-based device management, and the use of Python SDKs and PowerTool for automation. Candidates learn how to automate workflows using DevOps and Infrastructure as Code (IaC) tools like Ansible and Terraform, integrating these with CI/CD pipelines and Git for streamlined operations. Advanced scripting techniques cover data extraction, reporting, and building automation scripts across Cisco UCS, ACI, and NX-OS platforms. Monitoring and logging with telemetry, SNMP, and syslog integration into tools like Splunk and Grafana complete the skill set. Overall, the certification equips network professionals to automate and manage modern data center infrastructures efficiently.
