Applied Chemical Process Design F. Aerstin,G. Street,2011-11-04 Development of a new chemical plant or process from concept evaluation to profitable reality is often an enormously complex problem Generally a plant design project moves to completion through a series of stages which may include inception preliminary evaluation of economics and market data development for a final design final economic evaluation detailed engineering design procurement erection startup and pro duction The general term plant design includes all of the engineering aspects involved in the development of either a new modified or expanded industrial plant In this context individuals involved in such work will be making economic evaluations of new processes designing individual pieces of equipment for the proposed new ventures or developing a plant layout for coordination of the overall operation Because of the many design duties encountered the engineer involved is many times referred to as a design engineer If the latter specializes in the economic aspects of the design the individual may be referred to as a cost engineer On the other hand if he or she emphasizes the actual design of the equipment and facilities necessary for carrying out the process the individual may be referred to as a process design engineer The material presented in this book is intended to aid the latter in developing rapid chemical designs without becoming unduly involved in the often complicated theoretical underpinnings of these useful notes charts tables and equations

Lees' Loss Prevention in the Process Industries Frank Lees, 2005-01-10. Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport. Plants have become larger and are often situated in or close to densely populated areas. Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough, Bhopal, Chernobyl, Three Mile Island, the Phillips 66 incident, and Piper Alpha, to name but a few. The field of Loss Prevention is and continues to be of supreme importance to countless companies, municipalities, and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas, thus increasing the hazard of loss of life or property. This book is a detailed guidebook to defending against these and many other hazards. It could, without exaggeration, be referred to as the bible for the process industries. This is THE standard reference work for chemical and process engineering safety professionals. For years it has been the most complete collection of information on the theory, practice, design elements, equipment regulations, and laws covering the field of process safety. An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers, and managers can be found in this all encompassing reference. Instead, Frank Lees' world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field, Sam Mannan, is professor of chemical engineering at Texas A&M. Principles, practice, codes, standards, data, and references needed by those practicing in the field.
