Foreign Cyber Threats Committee on Small Business United States House of Representatives, Committee on Small Business United State, 2017-05-06 The information technology or IT revolution has provided small businesses with new tools and opportunities to compete in the global economy However cybersecurity experts warn about the varied cyber threats facing America's 28 million small businesses The Office of the National Counterintelligence Executive released a report in 2011 stating that tens of billions of dollars in trade secrets intellectual property and technology are being stolen each year from computer systems in the Federal Government from corporations and from academic institutions China and Russia were cited as the two largest participants in cyber espionage According to a recent report by Verizon Enterprise over 70 percent of cyber attacks occurred in businesses with fewer than 100 employees Even one cyber attack can be devastating for small businesses making prevention and protection absolutely critical A 2014 survey from the National Small Business Association estimated the average cost of a cyber attack on a small business to be over 32,000 a huge hit for a small business

Small Business Information Sharing Committee on Small Business United States House of Representatives, Committee on Small Business United State, 2018-07-24 In today's global economy small businesses are increasingly turning to foreign technology to remain competitive in the world marketplace However these same products and services also provide new opportunities for foreign cyber criminals to infiltrate small business information technology systems allowing them to access sensitive and valuable information A recent survey found that 81 percent of small businesses are concerned about a cyber attack but only 63 percent have the most basic

cybersecurity measures in place to combat such an attack Cyber attacks pose a higher risk for small businesses since most do not have the means to hire specialized employees or pay the average 32 000 in damages should they be hit with a cyber attack And cyber threats for small businesses are on the rise However small businesses are still hesitant to engage with the federal government This is often due to uncertainty surrounding legal liabilities concerns about privacy and data protection and a number of other factors Still federal information sharing is crucial to ensuring that small businesses have every resource possible to combat cyber threats and the confidence they need to engage with the federal agencies tasked with protecting them Many cyber threats towards small businesses come at the hands of foreign bad actors sometimes foreign governments in an attempt to undermine the United States national security and economy In fact the Department of Homeland Security recently published a public notice exposing a vulnerability in a notable security camera company Hikvision one of the top five largest manufacturers of security cameras worldwide is 42 percent owned by the Chinese government and in 2017 the Department of Homeland Security learned that many of its cameras were able to be hacked and remotely controlled

The VCISO Playbook Peter Green,Yan Ross,2025-06-30 The vCISO Playbook How Virtual CISOs Deliver Enterprise Grade Cybersecurity to Small and Medium Businesses SMBs Protect Your Data with a vCISO Working for Your Business The authors of this Guide have focused on two principal audiences Small and Midsized Businesses SMBs and Virtual Chief Information Security Officers vCISOs vCISOs in this context may also be referred to as Subject Matter Experts SMEs By extension we include in our audience trusted professional advisers to SMBs such as attorneys investment bankers and financial consultants Our combined experience in cybersecurity and small business matters spans over 50 years and we have concentrated on the intersection of the needs of SMBs with the capabilities of vCISOs We are versed in the growing necessity of SMBs in the supply chains of critical infrastructure to demonstrate that they have taken steps to assure their ability to prevent or recover from cyber attacks Note that we have included two Appendices with public source information on the DHS CISA list of the 16 critical infrastructure

sectors as well as SMBs participation in their supply chains Appendix 3 sets out the features of Beta Centauri our proprietary program to create an efficient working relationship between SMBs and vCISOs In Appendix 4 we have included summaries of four articles published recently in Cyber Defense Magazine on the stages of successful relationships between SMBs and vCISOs Typically SMBs have experienced a fundamental conflict between the importance of managing the risk of cyber attacks and the cost of having a full time Chief Information Security Officer CISO To begin with the basic techniques of cyber risk management can be overwhelming to owners and managers of SMBs they are complex and tend to change quickly as new forms of attack and response develop According to Bank of America s most recent Small Business Report while 71% of small businesses report that they have digitally optimized their operations over the past 12 months only 21% have added cybersecurity measures to their businesses Of mid sized businesses 90% report that cybersecurity is a threat to their business but only 63% are keeping software up to date 60% are investing in digital security systems and a paltry 50% are investing in employee security training 1 Unfortunately the myth persists that SMBs are too small to be targets for cyber criminals On the contrary they are often low hanging fruit with a combination of lax cybersecurity measures making them subject to existential threats by such attack modes as ransomware According to a Microsoft report conducted by research firm Bredin one third of SMBs suffered a cyber attack during the past year 2024 with the average cost of each incident amounting to over 250 000 2 The potential adverse impact of a ransomware attack or data breach can be devastating It has been observed that it would have a similar effect on a company in the critical infrastructure supply chain as a provider of services requiring security clearances for employees If a vital employee suffered an identity theft incident they would be unable to access the government secure facility to carry out their work 1 Bank of America 2024 2024 Business Owner Report <https://business.bofa.com/en-us/content/2024-business-owner-report.html> 2 <https://cdn.dynmedia.1.microsoft.com/is/content/microsoftcorp/microsoft/final/en-us/microsoft-brand/documents/SMB-Cybersecurity-Report-Final.pdf> [Creating a Small Business Cybersecurity Program](#) Alan Watkins,2020-06-22 This book in the CISO Desk Reference Guides small business series is targeted toward businesses with 25 to 500 employees and limited or no technology or security staff It provides non technical practical step by step instructions for small business owners who need to create a cybersecurity program The methodology is appropriate for any industry sector and customizable for the size of the business **Cyber Security in the Small and Medium Business** Antonio Buhagiar,2024-11-19 Cybersecurity in the Small and Medium Business In today s digital age cybersecurity is no longer a luxury reserved for large corporations Small and medium sized businesses SMBs are increasingly becoming targets for cyberattacks making it imperative to prioritize cybersecurity measures This comprehensive guide provides essential insights and practical strategies to help SMBs safeguard their digital assets and protect their operations from cyber threats Key Topics Covered Understanding the Cyber Threat Landscape Explore the evolving tactics techniques and procedures used by cybercriminals to target SMBs Building a Strong Cybersecurity Foundation Learn how to
