CORE DRILLING

Core drilling can be considered both a geological and geophysical technique and can be used to determine the true vertical orientation of a target. The information and accuracy of the results are the foundation of seismic. Core drilling also provides the location of structural trap potential. Core drills are used frequently to measure aquifer thickness where the existing data is sparse (needed to correct downward time to depth). The two locations are determined and corrected by comparison and adjustment to known well locations. Seismic interpretation and structural interpretation (including structural and stratigraphic correlation grids, horizon correlation and all the other significant well data) include structural interpretation correlation grids and to identify every horizon.

SEISMIC

Seismic behaviour data normally has velocity, travel distance, time pressure, to any velocity, dip and all the effects of geological structures.
