Artisanal Enlightenment Paola Bertucci, 2017-11-28 A groundbreaking work that places the mechanical arts and the world of making at the heart of the Enlightenment What would the Enlightenment look like from the perspective of artistes the learned artisans with esprit who presented themselves in contrast to philosophers savants and routine bound craftsmen Making a radical change of historical protagonists Paola Bertucci places the mechanical arts and the world of making at the heart of the Enlightenment At a time of great colonial commercial and imperial concerns artistes planned encyclopedic projects and sought an official role in the administration of the French state The Soci t des Arts which they envisioned as a

state institution that would foster France's colonial and economic expansion was the most ambitious expression of their collective aspirations. Artisanal Enlightenment provides the first in-depth study of the Society and demonstrates its legacy in scientific programs, academies, and the making of Diderot and D'Alembert's Encyclopédie. Through insightful analysis of textual, visual, and material sources, Bertucci provides a groundbreaking perspective on the politics of writing on the mechanical arts and the development of key Enlightenment concepts such as improvement, utility, and progress.

Current Research in Neuroadaptive Technology Stephen H. Fairclough, Thorsten O. Zander, 2021-11-13. Current Research in Neuroadaptive Technology provides readers with insight into the state-of-the-art field of neuroadaptive technology. The book covers the breadth and depth of current research in this field, covering a range of application domains in sufficient technical detail. The multidisciplinary character of this field means that the publication of key research is often fragmented across specialist journals. Here, the editors have consolidated current research carefully, selecting key topics that are clustered around the concept of neuroadaptive technology. In summary, the book meets the needs of readers by consolidating multidisciplinary research around a nascent technological concept. The topic of neuroadaptive technology is novel and contemporary, and editors Dr. Stephen H. Fairclough and Dr. Thorsten O. Zander have captured issues related to this emerging technology at the point of inception. It is a key reference for biomedical engineers and researchers in neural engineering, biomedical engineering, computer science, and mathematics. Includes applications of neuroadaptive technology in a variety of disciplines. Comprises in-depth technical coverage of Passive Brain-Computer Interfaces, Physiological Computing, Affective Computing, Neurofeedback, and Closed-Loop Human-Computer Interaction. Covers topics such as monitoring safety-critical behaviour, brain-computer interfaces, neurofeedback, virtual reality, neurostimulation, tangible interfaces, mobile brain-body imaging, system taxonomy, and ethical implications of neuroadaptive technology. Covers applied research using techniques such as EEG, fNIRS, eye tracking, psychophysiology, spontaneous radio frequency transmission, and tDCS. Written by engineers to help engineers, computer scientists, researchers, and clinicians understand the technology and its applications.

1998 IEEE International Symposium on Information Theory, 1998.
