covers topics that **Coastal and Shelf Sea Modelling** Philip P. G. Dyke,2013-04-17 Since the computing revolution  
modelling has become the most important way in which we further our knowledge about how the sea moves and how the  
processes in the sea operate The coast and the continental shelf are two of the most important areas of the sea to understand  
Coastal and Shelf Sea Modelling is therefore very timely and important In this text modelling the processes that occur in the  
sea is motivated continually through real life examples Sometimes these are incorporated naturally within the text but there  
are also a number of case studies taken from the recent research literature These will be particularly valuable to students as  
they are presented in a style more readily accessible than that found in a typical research journal The motivation for  
modelling is care for the environment The well publicised problem of global warming the phenomenon of El Ni o more  
localised pollution scares caused by tanker accidents and even smaller scale coastal erosion caused by storms all provide  
motivation for modelling and all get coverage in this text Particularly novel features of the book include a systematic  
treatment of the modelling process in a marine context the inclusion of diffusion in some detail ecosystems modelling and a  
brief foray into wave prediction The final chapter provides the reader with the opportunity to do some modelling there are  
many worked examples followed by exercises that readers can try themselves All answers are provided Throughout the style

is informal and the technicalities in term of mathematics are kept to a minimum Coastal and Shelf Sea Modelling is particularly suitable for graduate marine and oceanographic modelling courses but will also prove useful to coastal engineers and students at any level interested in the quantitative modelling of marine processes It is stressed that only a minimal level of mathematics first year calculus or less is required the style and content is introductory
