Principles of Inductive Near Field Communications for Internet of Things Johnson I. Agbinya, 2022-09-01 Near field communication devices and the emerging field of Internet of things require efficient short range communication techniques Classical telecommunication theory however has so far focused on radiating electromagnetic signals which is more suited to terrestrial communication systems Over the last decade however considerable research and applications of inductive methods have emerged as innovative approaches for secure short range communications by changing the paradigm of an established model of electromagnetic communications We have witnessed the emergence of embedded inductive medical devices magneto inductive waveguides inductive pots and cooking devices magneto inductive sensors wireless power transfer inductive hearing aids and the emerging inductive point to point communication specifically termed near field communication NFC as used in mobile phones and payment cards to name a few While there exist a large set of distributed methods and algorithms detailing the design and performances of such applications a significant gap is observed as a lack of detailed collection of the methods in one place which could be easily understood and used quickly by someone seeking to apply the methods In this book this missing gap is filled with the required details and the theory of near field communication systems including both the radiating and reactive energy coupling near field systems in addition to the well known far field radiation techniques The book details the fundamental expressions and design methods which facilitate the creation of near field devices and equipment including embedded biomedical implants The book contains recent advances in inductive communications performance limitations and a collection of applications It also lays a strong foundation for the application of inductive methods for creating Internet of Things systems
