## **N Widths In Approximation Theory:**

**n-Widths in Approximation Theory** A. Pinkus, 2012-12-06 My original introduction to this subject was through conversations and ultimately joint work with C. A. Micchelli. I am grateful to him and to Profs. C. de Boor, E. W. Cheney, S. D. Fisher, and A. A. Melkman who read various portions of the manuscript and whose suggestions were most helpful. Errors in accuracy and omissions are totally my responsibility. I would like to express my appreciation to the SERC of Great Britain and to the Department of Mathematics of the University of Lancaster for the year spent there during which large portions of the manuscript were written and also to the European Research Office of the U.S. Army for its financial support of my research endeavors. Thanks are also due to Marion Marks who typed portions of the manuscript.

Methods of Approximation Theory in Complex Analysis and Mathematical Physics Andrei A. Gonchar, Edward B. Saff, 2008-01-03

The book incorporates research papers and surveys written by participants of an International Scientific Programme on Approximation Theory jointly supervised by Institute for Constructive Mathematics of University of South Florida at Tampa USA and the Euler International Mathematical Institute at St. Petersburg, Russia. The aim of the Programme was to present new developments in Constructive Approximation Theory. The topics of the papers are asymptotic behaviour of orthogonal polynomials, rational approximation of classical functions, quadrature formulas, theory of  $n$  widths, nonlinear approximation in Hardy algebras, numerical results on best polynomial approximations, wavelet analysis.

Selected Topics in Approximation and Computation is a combination of expositions of basic classical methods of approximation leading to popular splines and new explicit tools of computation including sinc methods, elliptic function methods, and positive operator approximation methods. It also provides an excellent summary of worst case analysis in Information Based Complexity. It relates optimal computational

Identification, Adaptation, Learning Sergio Bittanti, Giorgio Picci, 1996-07-01 This book collects the lectures given at the NATO Advanced Study Institute From Identification to Learning held in Villa Olmo Como Italy from August 22 to September 2 1994 The school was devoted to the themes of Identification Adaptation and Learning as they are currently understood in the Information and Control engineering community their development in the last few decades their inter connections and their applications These titles describe challenging exciting and rapidly growing research areas which are of interest both to control and communication engineers and to statisticians and computer scientists In accordance with the general goals of the Institute and notwithstanding the rather advanced level of the topics discussed the presentations have been generally kept at a fairly tutorial level For this reason this book should be valuable to a variety of researchers and to graduate students interested in the general area of Control Signals and Information Processing As the goal of the school was to explore a common methodological line of reading the issues the flavor is quite interdisciplinary We regard this as an original and valuable feature of this book
