★ Describe what is happening in figures 1-3. Is the population of mice different in figure 3 than in figure 1? Explain why.

Living things that are well adapted to their environment survive and reproduce. Those that are not well adapted don't survive and reproduce. An **adaptation** is any characteristic that increases **fitness**, which is defined as the ability to survive and reproduce.

★ What characteristic of the mice in figure 1 was an adaptation that increased fitness?

The table describes four female mice that live in a beach area which is mostly tan sand with scattered plants.

| Characteristics of each female mouse | Color of Fur |           |               |           |
|--------------------------------------|--------------|-----------|---------------|-----------|
|                                      | Black        | Tan       | Tan and Black | Cream     |
| Running speed                        | 8 cm/sec.    | 6 cm/sec. | 7 cm/sec.     | 5 cm/sec. |
| # pups produced by each female       | 0            | 11        | 3             | 0         |
| Age at death                         | 2 months     | 8 months  | 4 months      | 2 months  |

★ According to the definition given for fitness, which mouse would biologists consider the fittest? Explain why this mouse would be the fittest.

★ If a mouse's fur color is generally similar to its mother's color, what color fur would be the most common among the pups?
