Cloud Computing Roadmap Jeong Chun Phuoc, Fazly Salleh Abas, Abrar Yusuf, 2012 Cloud Computing technology represents the next quantum leap in internet super technology of the 21st century In a knowledge base economy two primary facets of Cloud Computing technology are Internal Cloud Computing ICC and External Cloud Computing ECC Systems In Malaysia both Private Cloud Computing pCC and Public Cloud Computing pCC options are being concurrently assessed from both economic and security aspects for strategic implementation and adoption in the industry domain In the design of a strategic roadmap various Cloud Computing Framework are being reviewed Of particular interest is the U S Commerce Department s National Institute of Standards and Technology NIST Cloud Computing Roadmap which is being studied by various governments for adoption and implementation at domestic national level This includes Malaysia and its Cloud Computing Blueprint However not all the strategic thrusts and terms as drafted in the US NIST are conducive for national implementation in Malaysia Malaysia s Cloud Computing Roadmap manifests different and unique national economic requirements taking into account several security input factors Besides the Internal Cloud Computing ICC and External Cloud Computing ECC options other Open Cloud Computing systems are being considered as well in conjunction with other open source Cloud Computing platforms from a three dimension analytical perspectives I Technical Advantage II Economic Development and III Legal and Privacy related implication Cloud Computing. Actionable Architecture Mathews George, 2014-01-23 Script from the year 2011 in the subject Computer Science Technical Computer Science grade 2 0 language English abstract This paper will demonstrate a pragmatic methodology used in conjunction with UML unified modeling language BPMN business process modeling notation along with engineering principles for describing an actionable architecture for cloud computing in the real world The fundamental paradigm of cloud computing whether it is for private or public usage revolves around the provisioning of services for everyone through rich resources that can be synergized through Internet based protocols The true definition of Cloud Computing is according to the author all about the practicalities of outsourcing all aspects of using computing resources to some form of external agency This means that the assumption for any cloud computing usage is the fact that the agency has a powerful resource base hardware software infrastructure platforms power supply backups failover mechanisms as well as management skills Therefore all users of the cloud computing services provided by the agency can work in a well defined demand supply mode with an insurmountable base of possible fault tolerant mechanisms to support best possible user experiences The user will have the unique experience of not being worried about where his her work is being done because cloud computing as defined above will enable him her to work in a virtualized environment but with the feeling of being close to the resources However the apparent ease available through cloud computing will raise problems associated with diverse types of risks Hence it is imperative to define new architectural blueprints as well as the associated business processes around them so as to provide measurable metrics that will allay the

fears of any user The architectural blueprint is not just meant to be a lot of diagrams and documents but they are to be modeled as actionable artifacts These actionable artifacts will allow for operational excellence that covers all types of functional as well as non functional requirements that any user expects The MDA model driven architecture approach coupled with BPM business process modeling and engineering principles as posited in this paper will allow for management of distributed communication scheduling security enhancements and rights as well as many other aspects that will make the user experience enjoyable and successful

reduce the total investment by the federal government in information technology IT data centers as well as realize other stated advantages of cloud adoption efficiency accessibility collaboration rapidity of innovation reliability and security In December 2010 the U S Chief Information Officer CIO released A 25 Point Implementation Plan to Reform Federal IT Management as part of a comprehensive effort to increase the operational efficiency of federal technology assets One element of the 25 Point Plan is for agencies to shift to a Cloud First policy which is being implemented through the Federal Cloud Computing Strategy The Cloud First policy means that federal agencies must 1 implement cloud based solutions whenever a secure reliable and cost effective cloud option exists and 2 begin reevaluating and modifying their individual IT budget strategies to include cloud computing However there are challenges facing agencies as they make this shift For example some agency CIOs have stated that in spite of the stated security advantages of cloud computing they are in fact concerned about moving their data from their data centers which they manage and control to outsourced cloud services This and other concerns must be addressed to build an agency culture that trusts the cloud Congress has a number of means to monitor the status of the Federal Cloud Computing Initiative FCCI Individual committees may wish to monitor agencies under their jurisdiction by holding hearings requesting review of an agency s status through the agency itself or a GAO study and or assessing an agency s progress and projected goals against the stated goals of the FCCI
