A Cascaded Inverter For Single Phase Grid Connected:

Cascaded Inverters for Grid-connected Photovoltaic Systems Bailu Xiao, 2014 With the extraordinary market growth in grid connected PV systems there is increasing interests in grid connected PV inverters Focus has been placed on cheap high efficiency and innovative inverter solutions leading to a high diversity within the inverters and new system configurations This dissertation chooses cascaded multilevel inverter topologies for grid connected PV systems to reduce the cost and improve the efficiency First a single phase cascaded H bridge multilevel PV inverter is discussed To maximize the solar energy extraction of each PV string an individual maximum power point tracking MPPT control scheme is applied which allows independent control of each dc link voltage A generalized nonactive power theory is applied to generate the reactive current reference Within the inverter's capability the local consumption of reactive power is provided to realize power factor correction Then the modular cascaded H bridge multilevel inverter is connected to a three phase utility system and nine PV panels Individual MPPT control is also applied to realize better utilization of PV modules Also mismatches between PV panels may introduce unbalanced power supplied to the three phase grid connected system Thus a modulation compensation scheme is applied to balance the three phase grid current by injecting a zero sequence voltage A modular cascaded multilevel inverter prototype has been built and tested in both the single phase and three phase PV system Simulation and experimental results are presented to validate the proposed control schemes The three phase cascaded voltage source inverter VSI as another cascaded inverter topology is also proposed for grid connected PV applications The equivalent model and average model of the three phase cascaded VSI are established to realize the central control In addition the control scheme applied in the traditional three phase two level VSI is modified for this application Simulation and experimental results are presented as well The targets of reducing the cost and improving the overall efficiency of the PV inverters can be achieved by applying the cascaded PV inverters and the proposed control schemes

Modular Cascaded H-Bridge Multilevel PV Inverter with Distributed MPPT for Grid-Connected Applications, 2014 This paper presents a modular cascaded H bridge multilevel photovoltaic PV inverter for single or three phase grid connected applications The modular cascaded multilevel topology helps to improve the efficiency and flexibility of PV systems To realize better utilization of PV modules and maximize the solar energy extraction a distributed maximum power point tracking MPPT control scheme is applied to both single phase and three phase multilevel inverters which allows the independent control of each dc link voltage For three phase grid connected applications PV mismatches may introduce unbalanced supplied power leading to unbalanced grid current To solve this issue a control scheme with modulation compensation is also proposed An experimental three phase 7 level cascaded H bridge inverter has been built utilizing 9 H bridge modules 3 modules per phase Each H bridge module is connected to a 185 W solar panel Simulation and experimental results are presented to verify the feasibility of the proposed approach

Recent Advances

in *Renewable Energy Automation and Energy Forecasting* Sarat Kumar Sahoo, Franco Fernando Yanine, Vikram Kulkarni, Akhtar Kalam, 2023-12-08 The advancement of sustainable energy is becoming an important concern for many countries The traditional electrical grid supports only one way interaction of power being delivered to the consumers The emergence of improved sensors actuators and automation technologies has consequently improved the control monitoring and communication techniques within the energy sector including the Smart Grid system With the support of the aforementioned modern technologies the information flows in two ways between the consumer and supplier This data communication helps the supplier in overcoming challenges like integration of renewable technologies management of energy demand load automation and control Renewable energy RE is intermittent in nature and therefore difficult to predict The accurate RE forecasting is very essential to improve the power system operations The forecasting models are based on complex function combinations that include seasonality fluctuation and dynamic nonlinearity The advanced intelligent computing algorithms for forecasting should consider the proper parameter determinations for achieving optimization For this we need new generation research areas like Machine learning ML and Artificial Intelligence AI to enable the efficient integration of distributed and renewable generation at large scale and at all voltage levels The modern research in the above areas will improve the efficiency reliability and sustainability in the Smart grid
