Say it with Symbols, 2002 **Connected Mathematics** Dale Seymour Publications, 1998 *Class Field Theory: Proofs and Applications* Daniel Fretwell, 2011-07-27 Research Paper postgraduate from the year 2011 in the subject Mathematics Number Theory grade Postgraduate University of Sheffield language English abstract This document is a continuation of my Semester 1 project on class field theory In the previous work we made a rounded exposition of the fundamentals of class field theory but in order to preserve the document length the main proofs had to be skipped We concentrate on filling in the gaps in this second installment Due to the need to complete the arguments left open last semester and the need for applications this part of the project is a little longer than it should have been It was not mentioned in the previous project but the class field theory we are studying here is global class field theory There is such a thing as local class field theory in which we study the Abelian extensions of local fields essentially fields that arise as completions of a number field with respect to places Actually we touch on these ideas slightly in this project but never quite get to defining a local Artin map and looking at the local analogues of the main theorems of global class field theory For those wanting to continue on to study local class field theory consider Chapter 7 of 2 To start off this project we shall first restate the main definitions and theorems This will be brief and those wanting to remind themselves of the details should consult my Semester 1 project There will be very little motivation or technical results here since this was the purpose of the work done previously We then set out to prove the main theorems of class field theory With our present knowledge this would not be a simple task and we soon find that we first have to invent or discover new concepts such as the idele group and the corresponding idele class group These are topological devices that take stock of all completions of a number field at once Such constructions will make the theory much easier to understand and formulate whilst at the same time generalising the theory to all Abelian extensions The cohomology of finite Abelian groups will be introduced and used alongside the idele theory to establish an

important inequality We use L series in conjunction with the ideal theory to establish another important inequality Combining the two inequalities will give a nice result that allows us to prove Artin reciprocity In order to prove the existence theorem we resort to using Kummer n extensions and the notion of a class field This middle chunk of the project will be quite technical but hopefully enjoyable and illuminating

Dynamic Formal Epistemology Patrick Girard, Olivier Roy, Mathieu Marion, 2011-01-06 This volume is a collation of original contributions from the key actors of a new trend in the contemporary theory of knowledge and belief that we call dynamic epistemology It brings the works of these researchers under a single umbrella by highlighting the coherence of their current themes and by establishing connections between topics that up until now have been investigated independently It also illustrates how the new analytical toolbox unveils questions about the theory of knowledge belief preference action and rationality in a number of central axes in dynamic epistemology temporal social probabilistic and even deontic dynamics
