

Mass Transfer

○ Self-diffusion

- *diffusion in a pure substance*
- *consider tagging molecules and watching how they migrate*

○ Diffusion equations

- *Combine mass balance with Fick's law*

$$\frac{\partial c}{\partial t} - D\nabla^2 c(\mathbf{r}, t) = 0$$

- *Take as boundary condition a point concentration at the origin*

$$c(\mathbf{r}, t) = \delta(\mathbf{r}) \quad \text{For given configuration, each molecule represents a point of high concentration (fluctuation)}$$

○ Solution

$$c(\mathbf{r}, t) = (2\pi Dt)^{-d/2} \exp\left(-\frac{r^2}{2Dt}\right)$$

○ Second moment

$$\begin{aligned} \langle r^2(t) \rangle &= \int r^2 c(\mathbf{r}, t) d\mathbf{r} \\ &= 2dDt \end{aligned}$$

RMS displacement increases as $t^{1/2}$

Compare to ballistic $r \sim t$

Solutions Manual to Accompany Transport Phenomena in Materials Processing E. J. Poirier, D. R. Poirier, G. H. Geiger, 1994 This text provides a teachable and readable approach to transport phenomena by providing numerous examples and applications The text leads the reader through the development and solution of relevant differential equations by applying familiar principles of conservation to numerous situations and by including many worked examples in each chapter The book is organized similarly to other texts in transport phenomena Section I deals with the properties and mechanics of fluid motion Section II with thermal properties and heat transfer and Section III with diffusion and mass transfer The authors depart from tradition by building on a presumed understanding of the relationships between the structure and properties of matter particularly in the chapters devoted to the transport properties Generous portions of the text numerous examples and many problems apply transport phenomena to materials processing *Transport Phenomena in Materials Processing* E.J. Transport Phenomena in Dispersed Media G. I. Kelbaliyev, D. B. Tagiyev, S.R. Rasulov, 2019-09-26 *Transport Phenomena in Dispersed Media* addresses the main problems associated with the transfer of heat mass and momentum The authors focus on the analytical solutions of the mass and heat transfer equations the theoretical problems of coalescence coagulation aggregation and fragmentation of dispersed particles the rheology of structured aggregate and kinetically stable disperse systems the precipitation of particles in a turbulent flow the evolution of the distribution function the stochastic counterpart of the mass transfer equations the dissipation of energy in disperse systems and many other problems that distinguish this book from existing publications

Key Selling Features Covers all technological processes taking place in the oil and gas complex as well as in the petrochemical industry Presents new original solutions for calculating design as well as for the development and implementation of processes of chemical technology Organized to first provide an extensive review of each chapter topic solve specific problems and then review the solutions with the reader Contains complex mathematical expressions for practical calculations Compares results obtained on the basis of mathematical models with experimental data *Analytical Solutions for Transport Processes* Günter Brenn, 2016-07-26 This book provides analytical solutions to a number of classical problems in transport processes i e in fluid mechanics heat and mass transfer Expanding computing power and more efficient numerical methods have increased the importance of computational tools However the interpretation of these results is often difficult and the computational results need to be tested against the analytical results making analytical solutions a valuable commodity Furthermore analytical solutions for transport processes provide a much deeper understanding of the physical phenomena involved in a given process than do corresponding numerical solutions Though this book primarily addresses the needs of researchers and practitioners it may also be beneficial for graduate students just entering the field
