**Studies on Genetic Algorithms in Image Processing** A. P. Shanthini, A. Antony S. J., T. Francis, 2012 Computer Vision is a branch of Computer Science and Engineering that aims to develop methods for electronically perceiving and understanding images The objective of this work is to use this technique to

develop algorithms for rigid body image registration and to prove that it is a versatile algorithm for evolutionary image registration Genetic Algorithm is used to find procedures to convert a binary image into another containing just a particular characteristic of interest The study in this thesis is both theoretical and applied in nature On the theoretical side a method for image registration is proposed and the gradient analysis of fitness functions is analysed In addition a method is developed to study the mathematical morphology of binary images On the application side Genetic Algorithm is applied to generate genetically optimized parameters to consistently yield image results comparable to those of their ideal counterparts

**Evolutionary Image Analysis and Signal Processing** Stefano Cagnoni, 2009-07-09 The publication of this book on evolutionary Image Analysis and Signal Processing IASP has two main

goals The first occasional one is to celebrate the 10th edition of EvoIASP the workshop which has been the only event specifically dedicated to this topic since 1999 The second more important one is to give an overview of the opportunities offered by Evolutionary Computation EC techniques to computer vision pattern recognition and image and signal processing It is not possible to celebrate EvoIASP properly without first acknowledging EvoNET the EU funded network of excellence which has made it possible for Europe to build a strong European research community on EC Thanks to the success of the first pioneering event organized by EvoNET held in 1998 in Paris it was possible to realize that not only was EC a fertile ground for basic research but also there were several application fields to which EC techniques could offer a valuable contribution That was how the idea of creating a single event EvoWorkshops out of a collection of workshops dedicated to applications of EC was born Amongst the possible application fields for EC IASP was selected almost accidentally due to the occasional presence within EvoNET of less than a handful of researchers who were interested in it I would lie if I stated that the event was a great success since its very start but it was successful enough to survive healthily for a couple of years before reaching its present size relevance and popularity

**Digital Image Processing** Uvais Qidwai, C.H. Chen, 2009-10-15 Avoiding heavy mathematics and lengthy programming details Digital Image Processing An Algorithmic Approach with MATLAB presents an easy methodology for learning the fundamentals of image processing The book applies the algorithms using MATLAB without bogging down students with syntactical and debugging issues One chapter can typically be completed per week with each chapter divided into three sections The first section presents theoretical topics in a very simple and basic style with generic language and mathematics The second section explains the theoretical concepts using flowcharts to streamline the concepts and to form a foundation for students to code in any programming language The final section supplies MATLAB codes for reproducing the figures presented in the chapter Programming based exercises at the end of each chapter facilitate the learning of underlying concepts through practice This textbook equips undergraduate students in computer engineering and science with an essential understanding of digital image processing It will also help them comprehend more advanced topics and sophisticated mathematical material in later courses A color insert is included in the text while various instructor resources are available on the author's website
