Building Services Engineering Spreadsheets David Chadderton, 2002-09-11 Building Services Engineering Spreadsheets is a versatile user friendly tool for design calculations Spreadsheet application software is readily understandable since each formula is readable in the location where it is used Each step in the development of these engineering solutions is fully explained The book provides study material in building services engineering and will be valuable both to the student and to the practising engineer It deals with spreadsheet use thermal transmittance building heat loss and heat gain combustion analysis fan selection air duct design water pipe sizing lumen lighting design electrical cable sizing at a suitable level for practical design work Commercially available software while very powerful and comprehensive does not allow the user any facility to look into the coded instructions The user has to rely upon the supplier for explanation updates and corrections The advantage that the spreadsheet applications provided with the book have over purchased dedicated software is that the user can inspect everything that the program undertakes Parts of the worksheets can be copied to other cells in order to expand the size of each worksheet Experienced spreadsheet operators can edit the cells to change the way in which data and calculations are used and with guidance from the explanatory build their own applications *Planning and Executing Credible Experiments* Robert J. Moffat, Roy W. Henk, 2021-02-02 Covers experiment planning execution analysis and reporting This single source resource guides readers in planning and conducting credible experiments for engineering science industrial processes agriculture and business The text takes experimenters all the way through conducting a high impact experiment from initial conception through execution of the experiment to a defensible final report It prepares the reader to anticipate the choices faced during each stage Filled with real world examples from engineering science and industry *Planning and Executing Credible Experiments A Guidebook for Engineering Science Industrial Processes Agriculture and Business* offers chapters that challenge experimenters at each stage of planning and execution and emphasizes uncertainty analysis as a design tool in addition to its role for reporting results Tested over decades at Stanford University and internationally the text employs two powerful free open source software tools GOSSET to optimize experiment design and R for statistical computing and graphics A website accompanies the text providing additional resources and software downloads A comprehensive guide to experiment planning execution and analysis Leads from initial conception through the experiment s launch to final report Prepares the reader to anticipate the choices faced throughout an experiment Honors the motivating question Employs principles and techniques from Design of Experiments DoE Selects experiment designs to obtain the most information from fewer experimental runs Offers chapters that propose questions that an experimenter will need to ask and answer during each stage of planning and execution Demonstrates how uncertainty analysis guides and strengthens each stage Includes examples from real life industrial experiments Accompanied by a website hosting open source software *Planning and Executing Credible Experiments* is an excellent resource for graduates
